*Cumulated Index Medicus*, 1994 *Biology and Pathology of Astrocyte-Neuron Interactions* Sergey Fedoroff, Bernhard H.J. Juurlink, J. Ronald Doucette, 2013-06-29 This volume is made up of papers presented at the Second International Altschul Symposium Biology and Pathology of Astrocyte Neuron Interactions The symposium was held in Saskatoon Canada at the University of Saskatchewan in May 1992 in memory of Rudolf Altschul a graduate of the University of Prague and a pioneer in the fields of the biology of the vascular and nervous systems Dr Altschul was Professor and Head of the Department of Anatomy at the University of Saskatchewan from 1955 to 1963 The Altschul Symposia were made possible by an endowment

left by Anni Altschul and by other contributions The symposia are held biennially One of the greatest challenges for present day scientists is to uncover the mechanisms of brain function Although cellular anatomy of the nervous system has already been well outlined and indeed was delineated by the beginning of the century experimental analysis of the function of the brain is relatively recent The framework of the brain is made up of stellate cells the astrocytes which are interconnected by means of their processes thus presenting a meshwork through which the neurons send their axons accompanied by oligodendrocytes Microglia are distributed throughout the brain

*Endothelial Modulation of Cardiac Function* Malcolm J Lewis,Ajay M Shah,2020-01-29 Paracrine and autocrine regulation of cardiac function by endothelial mediators is becoming important both physiologically and pathophysiologically This volume brings the researcher completely up to date with all aspects of endothelial regulation and cardiac function Acknowledged experts in each field have contributed making this work indispensable for researchers and of great interest to the clinical cardiologist The Endothelial Cell Research Series publishes significant reviews by experts in the field The individual volumes provide invaluable guides to researchers studying endothelial cells and are effective reference texts for anyone working in the general areas of vascular biology and neurotransmission Endothelium was originally considered to be an inert lining for the blood vessels but during the last fifteen years this view has had to be completely revised It is now accepted that the endothelium plays an important role in many diverse functions This volume concentrates on the effect of the endothelium on cardiac function It has been widely demonstrated that the endothelium exerts a paracrine influence on contraction of adjacent cardiac muscle through the release of several mediators such as endothelin and nitric oxide Recent studies also show that the effects of such mediators upon the heart are not limited to contraction alone

**Mechanisms of Platelet Activation and Control** Kalwant S. Authi,Steven P. Watson,Vijay V. Kakkar,2012-12-06

Recent years have seen tremendous advances in our understanding of the molecular mechanism of platelet activation. All aspects of signal transduction in platelets from the identification of surface receptors G proteins phospholipases protein kinases and phosphatases intracellular receptors for inositol phosphates the Ca<sup>2+</sup> regulatory machinery cytoskeletal constituents to the control mechanism employing cyclic nucleotides has seen an explosion of information regarding their importance and for each constituent in the family of molecules to which they belong. This information has been of interest to researchers across a wide spectrum of disciplines including biochemists pharmacologists cell biologists and clinicians. In April 1992 an International Symposium bearing the name of this volume was organised at the Thrombosis Research Institute to bring together scientists from across the world whose common interest was the study of platelet activation and its regulation. We were particularly encouraged by the positive response from our speakers and the participants their detailed contributions and the very lively discussions that took place throughout the two days of the symposium. Almost every aspect of signal transduction in human platelets was represented. Of the invited speakers twelve were from Europe including the U K eight from North America and one from Japan. This volume is a compilation of chapters submitted by the speakers and represents a concise but informative picture of the present knowledge of the mechanisms of platelet activation and control.

**Inflammatory Bowel Diseases** G.N. Tytgat, J.F.W.M. Bartelsman, S.J.H. van Deventer, 1995-12-31. There is currently an explosive growth of basic and clinical research in inflammatory bowel diseases. The extensive interest of the medical community in these diseases is largely explained by the devastating impact the illnesses have on the quality of life, their high prevalence in the community and the fact that so many medical disciplines are involved in tackling the immensely complex studies on pathogenesis, clinical expression and treatment possibilities. The Falk Symposium No 85 held in The Hague the Netherlands 29 June 1 July 1995 brought together over 80 speakers and 1000 participants from all over the world. Plenary sessions and workshops allowed the discussion of basic and clinical research enabling appropriate choices to be made. Topics reflected areas of high current basic research interest, clinical importance and actual or future treatment potential. Audience: An important work for all disciplines involved in research and therapy of inflammatory bowel diseases.

**Peroxisomes and their Key Role in Cellular Signaling and Metabolism** Luis A. del Río, 2013-07-03. Peroxisomes are a class of ubiquitous and dynamic single membrane bounded cell organelles devoid of DNA with an essentially oxidative type of metabolism. In recent years it has become increasingly clear that peroxisomes are involved in a range of important cellular functions in almost all eukaryotic cells. In higher eukaryotes including humans peroxisomes catalyze ether phospholipids biosynthesis fatty acid  $\alpha$  oxidation glyoxylate detoxification etc and in humans peroxisomes are associated with several important genetic diseases. In plants peroxisomes carry out the fatty acid  $\beta$  oxidation photorespiration metabolism of ROS RNS and RSS photomorphogenesis biosynthesis of phytohormones senescence and defence against pathogens and herbivores. In recent years it has been postulated a possible contribution of peroxisomes to cellular signaling. In this volume an updated view of the

capacity and function of peroxisomes from human animal fungal and plant origin as cell generators of different signal molecules involved in distinct processes of high physiological importance is presented
