Nanostructured Materials Jackie

Ying, 2001-12-14 This thematic volume of *Advances in Chemical Engineering* presents the latest advances in the exciting interdisciplinary field of nanostructured materials. Written by chemical engineers, chemists, physicists, materials scientists and bioengineers, this volume focuses on the molecular engineering of materials at the nanometer scale for unique size dependent properties. It describes a bottom up approach to designing nanostructured systems for a variety of chemical, physical and biological applications. *Nanostructured Materials* Philippe Knauth, Joop Schoonman, 2005-12-06 *Nanostructured Materials: Selected Synthesis Methods, Properties and Applications* presents several important recent advances in synthesis methods for nanostructured materials and processing of nano objects into macroscopic samples such as nanocrystalline ceramics. This book will not cover the whole spectrum of possible synthesis techniques which would be limitless but it presents especially interesting highlights in the domains of research of the editors. Subjects that are covered include the following: chimie douce approaches for preparation of a large variety of nanostructured materials including metals, alloys, semiconductors and oxides; hydrothermal synthesis with water as solvent and reaction medium can be specifically adapted to nanostructured materials; electrospraying as a powerful new route for the preparation of nanoparticles especially of oxides for electroceramics; nanoparticles processed into nanostructured ceramics by using dynamic compaction techniques; applications of nanostructured materials. This book complements the previous volume in this series: P. Knauth, J. Schoonman eds. *Nanocrystalline Metals and Oxides: Selected Properties and Applications* Kluwer Boston 2002. **Nanostructured Materials for Advanced Technological Applications** Johann Reithmaier, Plamen Petkov, Wilhelm Kulisch, Cyril Popov, 2009-08-29 Nanoscience and Nanotechnology are experiencing a rapid development in many aspects like real space atomic scale imaging, atomic and molecular manipulation, nano fabrication etc which will have a profound impact not only in every field of research but also on everyday life in the twenty first century. The common efforts of researchers from different countries and fields of science can bring complementary expertise to solve the rising problems in order to take advantage of the nanoscale approaches in Materials Science. Nanostructured materials i.e. materials made with atomic accuracy show unique properties as a consequence of nanoscale size confinement, predominance of interfacial phenomena and quantum effects. Therefore by reducing the dimensions of a structure to nanosize many inconceivable properties will appear and may lead to different novel applications from nanoelectronics and nanophotonics to nanobiological systems and nanomedicine. All this requires the contribution of multidisciplinary teams of physicists, chemists, materials scientists, engineers and biologists to work together on the synthesis and processing of nanomaterials and nanostructures understanding the properties related to the nanoscale, the design of nano devices as well as of new tools for the characterization of nano structured materials. The first objective of the NATO ASI on Nanostructured Materials for Advanced Technological Applications was to assess the up to date achievements and future perspectives of application of novel nanostructured materials focusing on the relationships material structure functional properties possible applications. Handbook of Nanostructured Materials and

Nanotechnology Hari Singh Nalwa, 2000 Nanostructured materials is one of the hottest and fastest growing areas in today's materials science field along with the related field of solid state physics Nanostructured materials and their based technologies have opened up exciting new possibilities for future applications in a number of areas including aerospace automotive x ray technology batteries sensors color imaging printing computer chips medical implants pharmacy and cosmetics The ability to change properties on the atomic level promises a revolution in many realms of science and technology Thus this book details the high level of activity and significant findings are available for those involved in research and development in the field It also covers industrial findings and corporate support This five volume set summarizes fundamentals of nano science in a comprehensive way The contributors enlisted by the editor are at elite institutions worldwide Key Features Provides comprehensive coverage of the dominant technology of the 21st century Written by 127 authors from 16 countries making this truly international First and only reference to cover all aspects of nanostructured materials and nanotechnology OCLC *Nanostructured Materials in Electrochemistry* Ali Eftekhari, 2008-06-25 Providing the unique and vital link between the worlds of electrochemistry and nanomaterials this reference and handbook covers advances in electrochemistry through the nanoscale control of electrode structures as well as advances in nanotechnology through electrochemical synthesis strategies It demonstrates how electrochemical methods are of great scientific and commercial interest due to their low cost and high efficiency and includes the synthesis of nanowires nanoparticles nanoporous and layered nanomaterials of various compositions as well as their applications ranging from superior electrode materials to energy storage biosensors and electroanalytical devices
