Jalobeanu,2015 Francis Bacon introduced his contemporaries to a new way of investigating nature He called it natural and experimental history Despite its rather traditional name Bacon s natural and experimental history was a new discipline it comprised new ideas new practices and new models of collaborative research This new discipline was in many ways a surprisingly successful project It provided early modern naturalists with tools methods and models for both investigating nature and writing about their subject It also offered a set of norms and values for guiding research And yet this new discipline was not a science of nature it was more like an art This book aims to trace the emergence evolution and reception of Francis Bacon s art of experimental natural history Reassembling the Strange Thomas Anderson,2018-10-15 This book examines how Westerners understood and processed Madagascar and its environment during the nineteenth century Madagascar s unique ecosystem crafted its reputation as a strange place full of unusual species Westerners however often minimized Madagascar s peculiar features to stress the commonality of its fauna and flora with the world The attempt to understand the island through science led to a domestication of its environment that created the image of a tame and known world capable of being controlled and used by Western powers At the heart of the exploration of Madagascar and its transformation in Western eyes from a strange world to a cash crop colony were missionaries and naturalists who relied upon global experiences to master the island by normalizing the peculiar qualities of Madagascar s environment This book reveals how the environment played a dominant role in understanding the island and its people and how current environmental debates have evolved from earlier policies and discussions about the environment
