**Communicating Physics** Josep Simon, 2016-09-12 The textbooks written by Adolphe Ganot 1804 1887 played a major role in shaping the way physics was taught in the nineteenth century Ganot's books were translated from their original French into more than ten languages including English allowing their adoption as standard works in Britain and spreading their influence as far as North America Australia India and Japan Simon's Franco British case study looks at the role of Ganot's two textbooks *Traite elementaire de physique experimentale et appliquee* 1851 and *Cours de physique purement experimentale* 1859 and their translations into English by Edmund Atkinson The study is novel for its international comparison of nineteenth century physics its acknowledgement of the role of book production on the impact of the titles and for its emphasis on the role of communication in the making of science

Popularizing Science and

Technology in the European Periphery, 1800-2000 Faidra Papanelopoulou, 2016-03-23 The vast majority of European countries have never had a Newton Pasteur or Einstein Therefore a historical analysis of their scientific culture must be more than the search for great luminaries Studies of the ways science and technology were communicated to the public in countries of the European periphery can provide a valuable insight into the mechanisms of the appropriation of scientific ideas and technological practices across the continent The contributors to this volume each take as their focus the popularization of science in countries on the margins of Europe who in the nineteenth and twentieth centuries may be perceived to have had a weak scientific culture A variety of scientific genres and forums for presenting science in the public sphere are analysed including botany and women teaching and popularizing physics and thermodynamics scientific theatres national and international exhibitions botanical and zoological gardens popular encyclopaedias popular medicine and astronomy and genetics in the press Each topic is situated firmly in its historical and geographical context with local studies of developments in Spain Portugal Italy Hungary Denmark Belgium and Sweden Popularizing Science and Technology in the European Periphery provides us with a fascinating insight into the history of science in the public sphere and will contribute to a better understanding of the circulation of scientific knowledge
