Rice Biofortification Sally Brooks, 2010-09-23 Biofortification the enrichment of staple food crops with essential micronutrients has been heralded as a uniquely sustainable solution to the problem of micronutrient deficiency or hidden hunger Considerable attention and resources are being directed towards the biofortification of rice the world's most important food crop Through an in depth analysis of international rice biofortification efforts across the US Philippines and China this book provides an important critique of such goal oriented top down approaches These approaches the author argues exemplify a model of global public goods science that is emerging within complex international research networks It provides vital lessons for those researching and making decisions about science and research policy showing that if this model becomes entrenched it is likely to channel resources towards the search for silver bullet solutions at the expense of more incremental approaches that respond to locality diversity and the complex and uncertain interactions between people and their environments The author proposes a series of key changes to institutions and practices that might allow more context responsive alternatives to emerge These issues are particularly important now as increasing concerns over food security are leading donors and policy makers to commit to ambitious visions of impact at scale visions which may never become a reality and may preclude more effective pathways from being pursued Published in association with the Economic and Social Research Council ESRC

Cooperation Networks and Economic Development Andrés Cárdenas O'Farrill, 2021-02-11 For most Western audiences Cuba is a touristic paradise stuck in time and virtually detached from world technology networks by the US embargo anything but a hub of industrial innovation and high value added biotechnology However a closer look reveals more subtle but equally powerful stories that challenge the homogenizing assumptions of conventional economics and open up scope for more sophisticated reflections on Cuban economy and industry From this kind of enquiry emerges the case of the internationally respected Cuban biotech industry as the most successful case of science and technology policy in the country's economic history The book takes an interdisciplinary approach exploring issues such as interdependency purpose and history as natural constituencies of the innovation process It also examines the dynamic and crucial role played by the state in the formation of innovative business enterprises This book will be of interest to academic researchers in the fields of innovation and economic development

The Genealogy of a Gene Myles W. Jackson, 2015-03-06 The history of the CCR5 gene as a lens through which to view such issues as intellectual property Big Pharma personalized medicine and race and genomics In *The Genealogy of a Gene* Myles Jackson uses the story of the CCR5 gene to investigate the interrelationships among science technology and society Mapping the varied genealogy of CCR5

intellectual property natural selection Big and Small Pharma human diversity studies personalized medicine ancestry studies and race and genomics Jackson links a myriad of diverse topics The history of CCR5 from the 1990s to the present offers a vivid illustration of how intellectual property law has changed the conduct and content of scientific knowledge and the social political and ethical implications of such a transformation The CCR5 gene began as a small sequence of DNA became a patented product of a corporation and then when it was found to be an AIDS virus co receptor with a key role in the immune system it became part of the biomedical research world and a potential moneymaker for the pharmaceutical industry When it was further discovered that a mutation of the gene found in certain populations conferred near immunity to the AIDS virus questions about race and genetics arose Jackson describes these developments in the context of larger issues including the rise of biocapitalism the patentability of products of nature the difference between U S and European patenting approaches and the relevance of race and ethnicity to medical research
