Nature and History Ignazio Masulli, 1990 First Published in 1990 Routledge is an imprint of Taylor Francis an informa company

Systems Science and Cybernetics - Volume I Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of

communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatorial problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence *Evolutionary Theory in the Social Sciences* William M. Dugger, Howard J. Sherman, 2003

Evolutionary Theory in the Social Sciences: Early foundations and later contributions William M.

Dugger, Howard J. Sherman, 2003 A Natural History of Rape Randy Thornhill, Craig T. Palmer, 2001-02-23 A biologist and an anthropologist use evolutionary biology to explain the causes and inform the prevention of rape In this controversial book Randy Thornhill and Craig Palmer use evolutionary biology to explain the causes of rape and to recommend new approaches to its prevention According to Thornhill and Palmer evolved adaptation of some sort gives rise to rape the main evolutionary question is whether rape is an adaptation itself or a by product of other adaptations Regardless of the answer Thornhill and Palmer note rape circumvents a central feature of women s reproductive strategy mate choice This is a primary reason why rape is devastating to its victims especially young women Thornhill and Palmer address and claim to demolish scientifically many myths about rape bred by social science theory over the past twenty five years The popular contention that rapists are not motivated by sexual desire is they argue scientifically inaccurate Although they argue that rape is biological Thornhill and Palmer do not view it as inevitable Their recommendations for rape prevention include teaching young males not to rape punishing rape more severely and studying the effectiveness of chemical castration They also recommend that young women consider the biological causes of rape when making decisions about dress appearance and social activities Rape could cease to exist they argue only in a society knowledgeable about its evolutionary causes The book includes a useful summary of evolutionary theory and a comparison of evolutionary biology s and social science s explanations of human behavior The authors argue for the greater explanatory power and practical usefulness of evolutionary biology The book is sure to stir up discussion both on the specific topic of rape and on the larger issues of how we understand and influence human behavior

Proceedings of the Workshop on Cognitive Social Sciences Ron Sun, The History and Philosophy of Social Science H. Scott Gordon, 2002-09-11 First published in 1993 Routledge is an imprint of Taylor Francis an informa company *Companion to the History of Modern Science* G N Cantor, G.N. Cantor, J.R.R. Christie, M.J.S. Hodge, R.C. Olby, 2020-10-07 The 67 chapters of this book describe and analyse the development of Western science from 1500 to the present day Divided into two major sections The Study of the History of Science and Selected Writings in the History of Science the volume

describes the methods and problems of research in the field and then applies these techniques to a wide range of fields. Areas covered include the Copernican Revolution, Genetics, Science and Imperialism, the History of Anthropology, Science and Religion, Magic and Science. The companion is an indispensable resource for students and professionals in History, Philosophy, Sociology and the Sciences as well as the History of Science. It will also appeal to the general reader interested in an introduction to the subject.

Nature Revealed Edward O. Wilson, 2006-03. Two time Pulitzer Prize winner Edward O. Wilson is one of the leading biologists and philosophical thinkers of our time. In this compelling collection, Wilson's observations range from the tiny glands of ants to the nature of the living universe. Many of the pieces are considered landmarks in evolutionary biology, ecology and behavioral biology. Wilson explores topics as diverse as slavery in ants, the genetic basis of societal structure, the discovery of the taxon cycle, the original formulation of the theory of island biogeography, a critique of subspecies as a unit of classification and the conservation of life's diversity. Each article is presented in its original form, dating from Wilson's first published article in 1949 to his most recent exploration of the natural world. Preceding each piece is a brief essay by Wilson that explains the context in which the article was written and provides insights into the scientist himself and the debates of the time. This collection enables us to share Wilson's various vantage points and to view the complexities of nature through his eyes. Wilson aficionados along with readers discovering his work for the first time will find in this collection a world of beauty, complexity and challenge.

Reading Human Nature Joseph Carroll, 2011-03-01. As the founder and leading practitioner of literary Darwinism, Joseph Carroll remains at the forefront of a major movement in literary studies. Signaling key new developments in this approach, *Reading Human Nature* contains trenchant theoretical essays, innovative empirical research, sweeping surveys of intellectual history and sophisticated interpretations of specific literary works, including *The Picture of Dorian Gray*, *Wuthering Heights*, *The Mayor of Casterbridge* and *Hamlet*. Evolutionists in the social sciences have succeeded in delineating basic motives but have given far too little attention to the imagination. Carroll makes a compelling case that literary Darwinism is not just another school or movement in literary theory. It is the moving force in a fundamental paradigm change in the humanities: a revolution. Psychologists and anthropologists have provided massive evidence that human motives and emotions are rooted in human biology. Since motives and emotions enter into all the products of a human imagination, humanists now urgently need to assimilate a modern scientific understanding of human nature. Integrating evolutionary social science with literary humanism, Carroll offers a more complete and adequate understanding of human nature.

The Return of Science Philip Pomper, David Gary Shaw, 2002. In this collection of essays, historians discuss the applications of evolutionary theory to cultural, social, economic and political phenomena. William H. McNeill presents a magisterial statement about the convergence of the sciences toward an evolutionary worldview. Several contributors offer support for this thesis. Anthropologist Donald Brown and archaeologist Albert Naccache bring together the realms of biology and culture in examinations of evolved human features and modes of evolution. Demographer Noel Bonneuil

and neuroscientist Alonso Pena apply mathematics to historical evolutionary processes such as the decision making of human agents and cultural diffusion Choice, 1998 **New Evolutionary Social Science** Heinz-Jürgen Niedenzu, Tamas Meleghy, Peter Meyer, 2015-11-17 Social scientists have long declared their autonomy from the natural sciences and in doing so have tended to neglect important biological constraints on human nature Many sociological theories have suggested a nearly complete malleability of patterns of social life The New Evolutionary Social Science challenges this view by building on Stephen K Sanderson's Darwinian conflict theory which sets out to synthesise sociological theories with key findings from biology into an overarching scientific paradigm Configuring and expanding this groundbreaking theory the contributors to this volume are well known European and American experts in evolutionary science The New Evolutionary Social Science develops a new basis for understanding social change and the world's future through a better integration of the natural and social sciences The American Journal of Sociology Albion W. Small, Ellsworth Faris, Ernest Watson Burgess, 1914

Established in 1895 as the first U S scholarly journal in its field AJS remains a leading voice for analysis and research in the social sciences presenting work on the theory methods practice and history of sociology AJS also seeks the application of perspectives from other social sciences and publishes papers by psychologists anthropologists statisticians economists educators historians and political scientists *Reflecting on Darwin* Eckart Voigts, Barbara Schaff, 2016-04-08 Taking up the historical evolution of Darwin and his theories and the cultural responses they have inspired *Reflecting on Darwin* poses the following questions How are the apparatuses in the mid nineteenth century and at the turn of the twenty first century interconnected with bio scientific paradigms in art literature culture and science How are naturalism determinism and Darwinism the eugenics of the nineteenth century and the genetic coding of the twentieth century positioned embodied and staged in various media configurations and media genres and How have particular media apparatuses formed displaced or stabilized the various concepts of humankind in the framework of evolutionary theory Ranging from the early circulation of Darwin's ideas to the present this interdisciplinary collection pays particular attention to Darwin's postmillennial reception Beginning with an overview of the historical development of contemporary ecological and ethical fears *Reflecting on Darwin* then turns to Darwin's influence on contemporary media neo Victorian literature and culture science fiction literature and film and contemporary theory In examining the plurality of ways in which Darwin has been rewritten and reappropriated this unique volume both mirrors and inspects the complexity of recent debates in Victorian and neo Victorian studies

Evolutionary History Edmund Russell, 2011-04-11 We tend to see history and evolution springing from separate roots one grounded in the human world and the other in the natural world Human beings have however become probably the most powerful species shaping evolution today and human caused evolution in other species has probably been the most important force shaping human history This book introduces readers to evolutionary history a new field that unites history and biology to create a fuller understanding of the past than either can produce on its own Evolutionary history can stimulate surprising

new hypotheses for any field of history and evolutionary biology How many art historians would have guessed that sculpture encouraged the evolution of tuskless elephants How many biologists would have predicted that human poverty would accelerate animal evolution How many military historians would have suspected that plant evolution would convert a counter insurgency strategy into a rebel subsidy With examples from around the globe this book will help readers see the broadest patterns of history and the details of their own life in a new light **On the Evolution of Media** Carlos A.

Scolari,2023-06-23 This book describes the lifecycle of media in the context of the media ecology presenting a general theoretical framework and a series of methodological procedures to support the construction of an eco evolutionary approach to media change Focusing on a series of processes emergence competition dominance hybridization adaptation extinction this book goes beyond a chronological approach to propose a reticulated and multi layered conception of media evolution If media evolution is a network what are the relationships between media species like What happens when a new media emerges into the media ecology How do new media influence the old ones Can media become extinct How do media adapt when the social and economic context changes How can media evolution be analysed What kinds of quantitative and qualitative techniques can be applied in media evolution research By presenting an innovative research approach and theoretical framework to media studies this book will be of keen interest to scholars and graduate students of new media media history and theory philosophy of technology mass communication and organisational studies The Oxford Handbook

of the History of Archaeology Margarita Díaz-Andreu,Laura Coltofean,2024 The Oxford Handbook of the History of Archaeology offers comprehensive perspectives on the origins and developments of the discipline of archaeology and the direction of future advances in the field Written by thirty six archaeologists and historians from all over the world it covers a wide range of themes and debates including biographical accounts of key figures scientific techniques and archaeological fieldwork practices institutional contexts and the effects of religion nationalism and colonialism on the development of archaeology God and the Book of Nature Mark Harris,2023-12-19 God and the Book of Nature develops theological views of the natural sciences in light of the recent theological turn in science and religion scholarship and the science engaged theology movement Centered around the Book of Nature metaphor it brings together contributions by theologians natural scientists and philosophers based in Europe and North America They provide an exploration of complementary and even contesting readings of the Book of Nature particularly in light of the vexing questions that arise around essentialism and unity in the field of science and religion Taking an experimental and open ended approach the volume does not attempt to unify the readings into a single plot that defines the Book of Nature still less a single theology of nature but instead it represents a variety of hermeneutical stances Overall the book embraces a constructive theological attitude toward the modern sciences and makes significant contributions to the research literature in science and religion *A Companion to*

the History of Economic Thought Warren J. Samuels,Jeff E. Biddle,John B. Davis,2008-04-15 Assembling contributions from

top thinkers in the field this companion offers a comprehensive and sophisticated exploration of the history of economic thought. The volume has a threefold focus: the history of economic thought, the history of economics as a discipline, and the historiography of economic thought. Provides sophisticated introductions to a vast array of topics. Focuses on a unique range of topics including the history of economic thought, the history of the discipline of economics, and the historiography of economic thought.
