*Nature's Building Blocks* John Emsley, 2001 Everything we see around us is made of the chemical elements they are Nature's building blocks Our own bodies contain about 30 of them some in abundance some in trace amounts but nevertheless vital to our health and some that are positively harmful The Earth consists of around 90 elements and again some are abundant such as the silicon and oxygen of rocks and soils while some are so rare that they make gold seem cheap yet even these can be part of our everyday life The total number of known elements is now 115 at the last count although most of the 25 new elements that have been synthesized in the past half century have existed for less than a day Some however have accumulated until they now threaten the environment *Nature's Building Blocks* explains the what why and wherefore of the chemical elements Arranged alphabetically from Actinium to Zirconium it is a complete guide to all 115 of those that are currently known and especially those which comprise everything we encounter in our everyday life The entry on each element reveals where it came from what role it may have in the human body and the foods that contain it There are also sections on its discovery its part in human health or illness the uses and misuses to which it is put and its environmental role A list of the main scientific data and outline properties are given for every element and the section ends with an Element of Surprise which highlights some unexpected way in which each element impinges on our everyday life **Nature's**

Nature's Building Blocks was published in paperback in 2003. In this readable, informative and fascinating guide to the elements, there are entries on each of the 100 odd chemical elements arranged alphabetically from actinium to zirconium. Each entry comprises an explanation of where the element's name comes from, followed by Body element, the role it plays in living things, Element of history, how and when it was discovered, Economic element, what it is used for, Environmental element, where it occurs, how much, Chemical element facts, figures and narrative, and Element of surprise, an amazing little known fact. Since publication of the first edition, there have been a number of developments. Three new chemical elements have been named and validated: darmstadtium, roentgenium and copernicium, and the section on trans-fermium elements has now been incorporated into the main part of the book. Economic uses of elements have grown, and some quite rare elements such as scandium are now economically important, along with updates to elements such as gold due to new roles in industry. Fully revised and updated for 2010, this browsable compendium holds a wealth of useful information.

 Shakeel Ahmed, Chaudhery Mustansar Hussain, 2018-10-08

Sustainable development is a very prevalent concept of modern society. This concept has appeared as a critical force in combining a special focus on development and growth by maintaining a balance of using human resources and the ecosystem in which we are living. The development of new and advanced materials is one of the powerful examples in establishing this concept. Green and sustainable advanced materials are the newly synthesized material or existing modified material having superior and special properties. These fulfil today's growing demand for equipment, machines and devices with better quality for an extensive range of applications in various sectors such as paper, biomedical, textile and much more. Volume 2 provides chapters on the valorization of green and sustainable advanced materials from a biomedical perspective as well as the applications in textile technology, optoelectronics, energy materials, systems and the food and agriculture industry.

*The Matter of History*  
 Timothy J. LeCain, 2017-07-31

New insights into the microbiome, epigenetics and cognition are radically challenging our very idea of what it means to be human, while an explosion of neo-materialist thinking in the humanities has fostered a renewed appreciation of the formative powers of a

dynamic material environment The Matter of History brings these scientific and humanistic ideas together to develop a bold new post anthropocentric understanding of the past one that reveals how powerful organisms and things help to create humans in all their dimensions biological social and cultural Timothy J LeCain combines cutting edge theory and detailed empirical analysis to explain the extraordinary late nineteenth century convergence between the United States and Japan at the pivotal moment when both were emerging as global superpowers Illustrating the power of a deeply material social and cultural history The Matter of History argues that three powerful things cattle silkworms and copper helped to drive these previously diverse nations towards a global Great Convergence

*Minerals in Africa* Francis Gudyanga, 2020-08-10 Africa's dire need to industrialize is universally acknowledged and it is evident that the continent's vast mineral resources can catalyze that industrialization This requires the promotion of local beneficiation and value addition of minerals to yield materials on which modern Africa's industry and society can rely This book is therefore about transforming Africa's comparative advantages in minerals into the continent's competitive edge regarding materials Mineral beneficiation and value addition form the basis and provide opportunities for mineral driven Africa's industrialization The scope of the book is three fold with inter connected relationships Information Technical and Policy oriented It will be a useful reference material for mining undergraduate students on beneficiation and value addition of each of the minerals found in Africa The book while presenting a broad overview of beneficiation and value addition of Africa's minerals provides crucial starting material for postgraduate research students and R D institutions who wish to delve into more advanced methods of extraction and utilization of mineral derived materials that are in Africa for the purpose of industrialization of the continent
