Milan N. Vego, 2004-11-23 Many books and articles have been written on wars in narrow seas. However, none deals in any comprehensive manner with the problems of strategy and conduct of naval operations. The aim of this book is to explain in some detail the characteristics of a war fought in narrow seas and to compare and contrast strategy and major operations in narrow seas and naval warfare in the open ocean. Maritime Strategy and Sea Control

Milan Vego, 2016-04-14 This book focuses on the key naval strategic objectives of obtaining and maintaining sea control. During times of war, sea control or the ability of combatants to enjoy naval dominance plays a crucial role in that side's ability to attain overall victory. This book explains and analyzes in much greater detail sea control in all its complexities and describes the main methods of obtaining and maintaining it. Building on the views of naval classical thinkers, this book utilizes historical examples to illustrate the main methods of sea control. Each chapter focuses on a particular method including destroying the enemy forces by a decisive action, destroying enemy forces over time, attrition, containing enemy fleet, choke point control, and capturing important enemy's positions, basing area. The aim is to provide a comprehensive theory and practice of the struggle for sea control at the operational level. It should therefore provide a guide to practitioners on how to plan and conduct operational warfare at sea. The book will be of much interest to students of naval strategy, defence studies, and security studies. **The War for England's Shores**

G. H. Bennett, 2025-04-22 The War for England's Shores examines the Kriegsmarine's S-Boat offensive along the English Channel and the North Sea from 1940 to 1945, together with British and later Allied responses to nullify that threat. Very fast and armed with torpedoes and mines, S-Boats posed a serious threat to the convoys that were forced to run close along the British coast on a daily basis. Despite the significance of this campaign and the real threat to the whole British war economy, it has been until now strangely overlooked by historians. Indeed, the book highlights issues around the maritime identity of those states and navies that see themselves in oceanic terms at the expense of engagement with and operations in coastal waters. Using an array of archival materials from Britain, Germany, and the USA, The War for England's Shores examines why the Germans failed to make the most of this opportunity to disrupt British trade. G. H. Bennett analyzes how the British slowly countered the threat by embracing new technologies and developing a system of sea control that gradually forced the German S-Boat arm from the offensive against Britain's coastal convoys and on to the defensive in the months leading up to the invasion of France. The author also looks at the S-Boat campaign along these convoy routes in the context of present-day interest in littoral warfare, so that the work has a vital and

current appeal and offers significant and surprising insights The book offers an unparalleled exploration of a key moment in the development of coastal warfare and will appeal to historians and enthusiasts as well as defense analysts and naval personnel The Pen and Ink Sailor John E. Talbott,1998 A work describing Sir Charles Middleton's creation of vital links

between the naval shore establishment policy makers in Whitehall and commanders at sea **Maritime Strategy and Sea Control** Milan Vego,2016-04-14 This book focuses on the key naval strategic objectives of obtaining and maintaining sea control During times of war sea control or the ability of combatants to enjoy naval dominance plays a crucial role in that side's ability to attain overall victory This book explains and analyzes in much greater detail sea control in all its complexities and describes the main methods of obtaining and maintaining it Building on the views of naval classical thinkers this book utilizes historical examples to illustrate the main methods of sea control Each chapter focuses on a particular method including destroying the enemy forces by a decisive action destroying enemy forces over time attrition containing enemy fleet choke point control and capturing important enemy's positions basing area The aim is to provide a comprehensive theory and practice of the struggle for sea control at the operational level It should therefore provide a guide to practitioners on how to plan and conduct operational warfare at sea The book will be of much interest to students of naval strategy defence studies and security studies All Possible Wars? Sam J. Tangredi,2000 This survey is a product of the Quadrennial Defense Review QDR 2001 Working Group a project of the Institute for National Strategic Studies at the National Defense University Sponsored by the Chairman of the Joint Chiefs of Staff the working group is an independent honest broker effort intended to build intellectual capital for the upcoming QDR More specifically it aims to frame issues develop options and provide insights for the Chairman the services and the next administration in three areas defense strategy criteria for sizing conventional forces and force structure for 2005 2010 One of the group's initial tasks was to assess the future security environment to the year 2025 This was pursued by surveying the available literature to identify areas of consensus and debate The goal was to conduct an assessment that would be far more comprehensive than any single research project or group effort could possibly produce This survey documents major areas of agreement and disagreement across a range of studies completed since the last QDR in 1997 Because it distills a variety of sources and organizes and compares divergent views this volume makes a unique contribution to the literature It also provides a particularly strong set of insights and assumptions on which both strategists and force planners can draw in the next Quadrennial Defense Review This survey does not claim to predict or illustrate all possible wars that America might face between now and the year 2025 Rather it attempts through analysis of representative and reputable sources to incorporate the most likely characteristics of the future security environment into a single scenario while heightening our awareness of dissenting viewpoints and plausible wild cards **Sea Power and the Asia-Pacific** Geoffrey Till,Patrick Bratton,2012-02-07 This volume examines the rise and fall of sea powers in the Asia Pacific region Two-Edged Sword Nicholas Tracy,2012-10-01 In the first major study of the Royal Canadian Navy's contribution to

foreign policy Nicholas Tracy takes a comprehensive look at the paradox that Canada faces in participating in a system of collective defence as a means of avoiding subordination to other countries Created in 1910 to support Canadian autonomy the Royal Canadian Navy has played an important role in defining Canada's relationship with the United Kingdom the United States and NATO Initially involved with participation in Imperial and Commonwealth defence the RCN's role shifted following the Second World War to primarily ensuring the survival of the NATO alliance and deflecting American influence over Canada Tracy demonstrates the ways in which the Navy's priorities have realigned since the end of the Cold War this time partnering with the US and NATO navies in global policing Insightful detailed and grounded in solid historical scholarship *A Two Edged Sword* presents a complete portrait of the shifting relevance and future of a cornerstone of Canadian defence

*The Development of Mine Warfare* Norman E. Youngblood, 2006-06-30 In 1997 the International Campaign to Ban Landmines ICBL coordinated the Convention on the Prohibition of the Use Stockpiling Production and Transfer of Anti Personnel Mines and on their Destruction As of mid 2005 145 states had signed the agreement The ICBL's efforts were in large part a response to the careless use of landmines in the previous fifty years The history of mine use in warfare however goes back much further than the World Wars of the 20th century and includes both land and sea use This first comprehensive study traces the technical tactical and ethical developments of mine warfare from ancient times to the present Beginning with mine warfare's roots in ancient Assyria and China Youngblood takes the reader through the centuries of debate about how these hidden weapons should be used A look at 19th century developments explores the intertwined development of land and sea mines and the inventors behind them including Robert Fulton Samuel Colt and Immanuel Nobel father of Alfred Nobel Subsequent chapters examine the use of mines in the American Civil War the Russo Japanese War both World Wars and the battlefields of the Cold War and chart key battles and technical innovations such as the development of air delivered munitions Finally the author addresses the ethical concerns raised by the careless mining namely the impact on civilians and the difficulties of de mining and the treaties that regulate landmine use

*The Royal Navy and the Capital Ship in the Interwar Period* Joseph Moretz, 2012-12-06 Joseph Moretz's innovative work focuses on what battleships actually did in the inter war years and what its designed war role in fact was In doing so the book tells us much about British naval policy and planning of the time Drawing heavily on

official Admiralty records and private papers of leading officers the author examines the navy's operational experience and the evolution of its tactical doctrine during the interwar period. He argues that operational experience combined with assumptions about the nature of a future naval war were more important in keeping the battleship afloat than conservatism in Navy.

**Educating the Royal Navy** Harry W. Dickinson, 2007-01-25 This volume provides the first comprehensive history of education and training for officers of the Royal Navy in the eighteenth and nineteenth centuries. It covers the development of educational provision from the first 1702 Order in Council appointing schoolmasters to serve in operational warships to the laying of the foundation stone of the present Royal Naval College Dartmouth in 1902. *Educating the Royal Navy 1702-1902* includes the establishment of the Royal Navy's first naval academy, the commissioning of the officer training ship HMS Britannia and the conduct of education at sea. It also covers the birth of higher education in the Service with the opening of the Royal Naval College Greenwich and the provision of technical education and training for a new category of officer, the naval engineer. This book will be essential reading for students of naval history and naval education and of much interest to professional military colleges studying the development of naval training.

**Seapower** Geoffrey Till, 2013-02-21 This is the third revised and fully updated edition of Geoffrey Till's *Seapower: A Guide for the 21st Century*. The rise of the Chinese and other Asian navies, worsening quarrels over maritime jurisdiction and the United States maritime pivot towards the Asia Pacific region remind us that the sea has always been central to human development as a source of resources and as a means of transportation, information exchange and strategic dominion. It has provided the basis for mankind's prosperity and security and this is even more true in the early 21st century with the emergence of an increasingly globalized world trading system. Navies have always provided a way of policing and sometimes exploiting the system. In contemporary conditions, navies and other forms of maritime power are having to adapt in order to exert the maximum power ashore in the company of others and to expand the range of their interests, activities and responsibilities. While these new tasks are developing, fast traditional ones still predominate. Deterrence remains the first duty of today's navies, backed up by the need to fight and win if necessary. How navies and their states balance these two imperatives will tell us a great deal about our future in this increasingly maritime century. This book investigates the consequences of all this for the developing nature, composition and functions of all the world's significant navies and provides a guide for anyone interested in the changing and crucial role of seapower in the 21st century. *Seapower* is essential reading for all students of naval power, maritime security and naval history and is highly recommended for students of strategic studies, international security and International Relations.

**Maritime Diplomacy in the 21st Century** Christian Le Mièrre, 2014-04-24 This book aims to redefine maritime diplomacy for the modern era. Maritime diplomacy encompasses a spectrum of activities from co-operative measures such as port visits, exercises and humanitarian assistance to persuasive deployment and coercion. It is an activity no longer confined to just navies but in the modern era is pursued by coast guards, civilian vessels and non-state groups. As states such as China

and India develop they are increasingly using this most flexible form of soft and hard power Maritime Diplomacy in the 21st Century describes and analyses the concept of maritime diplomacy which has been largely neglected in academic literature The use of such diplomacy can be interesting not just for the parochial effects of any activity but because any event can reflect changes in the international order while acting as an excellent gauge for the existence and severity of international tension Further maritime diplomacy can act as a valve through which any tension can be released without resort to conflict Written in an accessible but authoritative style this book describes the continued use of coercion outside of war by navies while also situating it more clearly within the various roles and effects that maritime forces have in peacetime This book will be of much interest to students of seapower naval history strategic studies diplomacy and international relations **The**

**Royal Navy and Nuclear Weapons** Richard Moore, 2018-12-07 This work examines British thinking about nuclear weapons in the period up to about 1970 looking at the subject through the eyes of the Royal Navy in the belief that this can offer new insights in this field The author argues that the Navy was always sceptical about nuclear weapons both on practical grounds and because of wartime and pre war experiences He suggests that this scepticism can teach us a good deal about military technological innovation in general **Navies of South-East Asia** James Goldrick, Jack McCaffrie, 2013 A comprehensive survey of the development and operations of the navies of South East Asia since the end of the Second World War from p 1

*Imperial Defence, 1868-1887* Donald MacKenzie Schurman, 2014-02-25 The technical transformation of the Royal Navy during the Victorian era posed many design tactical and operational problems for administrators from the 1830s onwards The switch from sail to steam required the creation of a system of defended coaling stations and a greater infrastructure

*The Merchant Marine in International Affairs, 1850-1950* Greg Kennedy, 2014-07-10 Merchant navies represent economic and industrial strength This study revises the definition of maritime power through a more comprehensive understanding and appreciation for the roles played by the merchant marine of a nation **Empire, Technology and Seapower** Howard J.

Fuller, 2014-01-03 This book examines British naval diplomacy from the end of the Crimean War to the American Civil War showing how the mid Victorian Royal Navy suffered serious challenges during the period Many recent works have attempted to depict the mid Victorian Royal Navy as all powerful innovative and even self assured In contrast this work argues that it suffered serious challenges in the form of expanding imperial commitments national security concerns precarious diplomatic relations with European Powers and the United States and technological advancements associated with the armoured warship at the height of the so called Pax Britannica Utilising a wealth of international archival sources this volume explores the introduction of the monitor form of ironclad during the American Civil War which deliberately forfeited long range power projection for local coastal command of the sea It looks at the ways in which the Royal Navy responded to this new technology and uses a wealth of international primary and secondary sources to ascertain how decision making at Whitehall affected that at Westminster The result is a better balanced understanding of Palmerstonian diplomacy from the end of the

Crimean War to the American Civil War the early evolution of the modern capital ship including the catastrophic loss of the experimental sail and turret ironclad H M S Captain naval power projection and the nature of empire technology and seapower This book will be of great interest to all students of the Royal Navy and of maritime and strategic studies in general
