Naval Radar:

   New Eye for the Navy David Kite Allison,1981 This study narrates the origin of radar at the Naval Research Laboratory Radar should be seen as the product not simply of one man or even a group of men but rather as the result of individuals working within the structure of a mission oriented research and development facility To comprehend how radar was developed when it was developed and why one must follow not just the evolution of technical progress but also the administrative and political decisions that shaped it One must understand how the talents and motivations of the people who created this new device were related to the particular institutional situation and historical context in which they labored The account is the story of a modern research and development laboratory in action It discusses one major accomplishment of one institution But it is also written to contribute to a broader understanding of the history of research and development laboratories in general and of the influence they have had on the course of modern American history The work of the Naval Research Laboratory on radar is a significant episode in that story   *Solving the Naval Radar Crisis* Raymond C. Watson,2008-01-23 When World War II started there was a crisis in naval radar few U S Navy ships had this vital weapon and almost no personnel were trained in the secret technology For the first time this crisis and its solution are fully covered in book form   *Target Detection by Marine Radar* John N. Briggs,2004-12-03 Radar is a legal necessity for the safe navigation of merchant ships and within vessel traffic services is indispensable to the operation of major ports and harbours Target Detection by Marine Radar concentrates solely on civil marine operations and explains how marine surveillance radars detect their targets The book is fully illustrated and contains worked examples to help the reader understand the principles underlying radar operation and to quantify the importance of factors such as the technical features of specific equipment the weather target reflection properties and the ability of the operator The precision with which targets are positioned on the radar screen and with which their progress is tracked or predicted depends on how definitely they have been detected therefore a whole chapter has been devoted to the issue of accuracy The various international regulations governing marine radar are examined a brief historical background is given to modern day practice and the book doses with a discussion of the ways in which marine radar may develop to meet future challenges   U.S. Naval Training Bulletin ,1947   **The Development of Radar Equipments for the Royal Navy, 1935–45** F.A. Kingsley,2016-07-27 This book presents authoritative accounts of the evolution development and application of Royal Naval radar from its inception in 1935 until the end of World War 2 The accounts are based on the individual authors contemporary experiences extensive archival research and discussions with surviving wartime colleagues An overview is presented of the pioneering work at HM Signal School later the Admiralty Signal Establishment followed by descriptions of the main programmes of radar development associated research and the problems of installation of the equipment in ships as well as its operation and maintenance at sea Tabulations of the characteristics and installations of all wartime Royal Naval radars are provided in the Appendices
