NBER Macroeconomics Annual 2009 Michael Woodford,2010 **The Effects of Economic Shocks on Heterogeneous Inflation Expectations** Yoosoon Chang,Fabio Gómez-Rodríguez,Mr. Gee Hee Hong,2022-07 In this paper we examine how economic shocks affect the distribution of household inflation expectations We show that the dynamics of households expected inflation distributions are driven by three distinctive functional shocks which influence the expected inflation distribution through disagreement level shift and ambiguity Linking these functional shocks to economic shocks we find that contractionary monetary shocks increase the average level of inflation expectation with anchoring effects with a reduction in disagreement and an increase in the share of households expecting future inflation to be between 2 to 4 percent Such anchoring effects are not observed when the high inflation periods prior to the Volcker disinflation are included Expansionary government spending shocks have inflationary effects on both short and medium run inflation expectations while an increase in personal income tax shocks is inflationary for mediumrun A surprise increase in gasoline prices increases the level of inflation expectations but lowers the share of households with 2 percent inflation expectations

Smooth Operator: Remittances and Fiscal Shocks Ms.Kimberly Beaton,Mr.Serhan Cevik,Mr.Reza Yousefi,2017-07-19 With 250 million migrants globally remittances are one of the major sources of income in many developing countries While there is abundant evidence that remittances facilitate consumption smoothing in receiving countries the literature has not considered whether this effect varies with the fiscal stance and during fiscal shocks Therefore we investigate the impact of

remittances on the stability of household consumption using both cross country and household level datasets Our focus is on whether the consumption smoothing effect changes with fiscal policy phases and whether remittances and government support are substitutes or complements in stabilizing household consumption We find that remittances help smooth consumption and hence improve welfare more during fiscal consolidation episodes while this impact is insignificant during fiscal expansions The results also indicate that the effect is more pronounced in countries with greater reliance on remittances

Blanchard,Mr.Eugenio Cerutti,Lawrence Summers,2015-11-06 We explore two issues triggered by the crisis First in most advanced countries output remains far below the pre recession trend suggesting hysteresis Second while inflation has decreased it has decreased less than anticipated suggesting a breakdown of the relation between inflation and activity To examine the first we look at 122 recessions over the past 50 years in 23 countries We find that a high proportion of them have been followed by lower output or even lower growth To examine the second we estimate a Phillips curve relation over the past 50 years for 20 countries We find that the effect of unemployment on inflation for given expected inflation decreased until the early 1990s but has remained roughly stable since then We draw implications of our findings for monetary policy
