**Water-Insoluble Drug Formulation** Ron Liu, 2018-03-12 Properties and Formulation From Theory to Real World Application Scientists have attributed more than 40 percent of the failures in new drug development to poor biopharmaceutical properties particularly water insolubility Issues surrounding water insolubility can postpone or completely derail important new drug development Even the much needed reformulation of currently marketed products can be significantly affected by these challenges More recently it was reported that the percentage increased to 90% for the candidates of new chemical entities in the discovery stage and 75% for compounds under development In the most comprehensive resource on the topic this third edition of Water Insoluble Drug Formulation brings together a distinguished team of experts to provide the scientific background and step by step guidance needed to deal with solubility issues in drug development Twenty three chapters systematically describe the detailed discussion on solubility theories solubility prediction models the aspects of preformulation biopharmaceutics pharmacokinetics regulatory and discovery support of water insoluble drugs to various techniques used in developing delivery systems for water insoluble drugs This book includes more than 15 water insoluble drug delivery systems or technologies illustrated with case studies and featuring oral and parenteral applications Highlighting the most current information and data available this seminal volume reflects the significant progress that has been made in nearly all aspects of this field The aim of this book is to provide a handy reference for pharmaceutical scientists in the handling of formulation issues related to water insoluble drugs In addition this book may be useful to pharmacy and chemistry undergraduate students and pharmaceutical and

biopharmaceutical graduate students to enhance their knowledge in the techniques of drug solubilization and dissolution enhancement

*Preparation of Water Samples for Asbestos Fiber Counting by Electron Microscopy* Eric J. Chatfield, Roger W. Glass, M. Jane Dillon, 1978

Particles at Fluid Interfaces Erica Wanless, Grant Webber, Syuji Fujii, 2019-05-09

Particles at Fluid Interfaces encompasses the processes and formulations that involve the stabilisation of fluid interfaces by adsorbed particles. The prevalence of these multiphase materials underpins their use in a broad range of industries from personal care and food technology to oil and mineral processing. The stabilisation conferred by the adsorbed particles can be transient as found in froth flotation or long lived as occurs within Pickering Emulsions. The particles can range in size from nanoparticles to millimetre sized particles and cover a spectrum from collapsed proteins polymeric colloids of controlled size and shape to high dispersity mineral particles.

*Green Hydrogen Production by Water Electrolysis* Junbo Hou, Min Yang, 2024-07-24

The world's largest economies have set clear development plans for hydrogen energy. From an Economy, Energy and Environment 3E point of view, hydrogen energy can be considered an ideal technology for enabling the energy transition from fossil fuels, restructuring energy systems, securing national energy sources, accelerating carbon neutralization and driving the development of technologies and industry. Green hydrogen production by water electrolysis is the key for hydrogen energy, and this book offers urgently needed guidance on the most important scientific fundamentals and practical applied technologies in this field. This book details materials, electrochemistry and mechanics. Covers ALK, PEM, AEM and SOEC water electrolysis including fundamentals and applications. Addresses trends, opportunities and challenges. This comprehensive reference is aimed at engineers and scientists working on renewable and alternative energy to meet global energy demands and climate action goals.

Dispersions Erik Kissa, 2017-11-22

Explaining principles essential for the interpretation of data and understanding the real meaning of the result, this work describes various methods and techniques used to characterize dispersions and measure their physical and chemical properties. It describes a variety of dispersions containing particles ranging from submicron sizes to aggregates and from hard particles to polymer latices.

Pharmaceutical Drug Delivery Systems and Vehicles Suryakanta Swain, Chinam Niranjana Patra, M. E. Bhanoji Rao, 2018-10-24

**Pressure-Sensitive Formulation** Istvan Benedek, 2020-06-07

Growing interest in the formulation of pressure sensitive adhesives as described in the first edition of this book, *Pressure Sensitive Formulation* VSP 2000 required a new enlarged edition including the design of pressure sensitive adhesives as a separate volume. Developments in the understanding of pressure sensitivity were necessary to use macromolecular chemistry for pressure sensitive design. Such developments include polymer physics and contact mechanics. Progress in coating technology, especially in in-line coating and synthesis, opened new ways for the design of pressure

sensitive adhesives and products as well. Actually pressure sensitive products with and without adhesives compete requiring a broad variety of material formulations and the corresponding manufacturing technology. The first volume of the book examines the theoretical aspects of pressure sensitive design based on macromolecular chemistry, macromolecular physics, rheology and contact mechanics. The second volume describes the practical aspects of pressure sensitive design and formulation related to product application. The advances in the various domains are described by specialists.

*Surfactants in Solution* K.L. Mittal, D.O. Shah, 2013-03-08. This volume chronicles the proceedings of the 8th International Symposium on Surfactants in Solution (SIS) held in Gainesville, FL, June 10-15, 1990. This series of symposia have been smoothly running since 1976, but the appellation *Surfactants in Solution* was used for the first time in 1982 in Lund. Since then our logo SIS has become very familiar to everyone involved in surfactants. In Lund, the meeting was billed as the Fourth International Symposium on Surfactants in Solution. Earlier three events were held under different rubrics, but proceedings of all these symposia except the 7th SIS held in Ottawa in 1988 have been properly documented. As a matter of fact, so far 10 volumes have appeared under the title *Surfactants in Solution*. 1, 2, 3. The program for the 9th SIS was very comprehensive and many ramifications of surfactants were covered, and it was a veritable international event. It contained a total of 384 papers by 869 authors from practically every corner of our planet. Just the sheer number of papers is a testimonial to the high tempo of research and tremendous interest in this wonderful class of materials. As in the past, there were plenary lectures, 5 invited talks, 37 oral presentations, 195 and poster presentations, 147. The plenary lectures were given by Prof. J. Th. G. Overbeek, Prof. C. A. Bunton, Prof. H. T. Tien, and Dr. J. Swalen. The lecture by Prof. Overbeek, the doyen of surface and colloid science, was a real treat.

*Ultrasonics* Dale Ensminger, Leonard J. Bond, 2024-02-21. Updated, revised, and restructured to reflect the latest advances in science and applications, the fourth edition of this best-selling industry and research reference covers the fundamental physical acoustics of ultrasonics and transducers with a focus on piezoelectric and magnetostrictive modalities. It then discusses the full breadth of ultrasonics applications involving low power sensing and high power processing for research, industrial, and medical use. This book includes new content covering computer modeling used for acoustic and elastic wave phenomena including scattering, mode conversion, transmission through layered media, Rayleigh and Lamb waves, and flexural plates, modern horn design tools, Langevin transducers, and material characterization. There is more attention on process monitoring and advanced nondestructive testing and evaluation (NDT/NDE) including phased array ultrasound (PAUT), long range inspection using guided ultrasonic waves (GUW), internally rotary inspection systems (IRIS), time of flight diffraction (TOFD), and acoustic emission (AE). These methods are discussed and applied to both metals and nonmetals, using illustrations in various industries including, now additionally, for food and beverage products. The topics of defect sizing capabilities and limitations, including the probability of detection (POD), are introduced. Three chapters provide a new treatment of high power ultrasonics for both fluids and solids, and again with examples of industrial engineering, food and beverage, pharmaceuticals.

petrochemicals and other process applications Expanded coverage is given to medical and biological applications covering diagnostics therapy and at the highest powers surgery Key Features Provides an overview of fundamental analysis and transducer technologies needed to design and develop both measurement and processing systems Considers applications in material characterization and metrology Covers ultrasonic nondestructive testing and evaluation and high power ultrasonics which involves interactions that change the state of material Highlights medical and biomedical applications of ultrasound focusing on the physical acoustics and the technology employed for diagnosis therapy surgery and research This book is intended for both the undergraduate and graduate scientists and engineers as well as the working professional who seeks to understand the fundamentals together with a holistic treatment of the field of ultrasonics and its diversity of applications
