Applied Groundwater Studies in Africa Segun Adelana, Alan MacDonald, 2008-09-23 Groundwater is Africa's most precious natural resource providing reliable water supplies for many people. Further development of groundwater resources is fundamental to increasing access to safe water across the continent to meet coverage targets and reduce poverty. There is also an increasing interest in the use of groundwater for irrigated agriculture as the climate becomes more variable. Sustainable development of the resource is not a trivial task and depends crucially on an understanding of the hydrogeology and people with the skills to make informed decisions on how groundwater can best be developed and managed in a sustainable fashion. Despite these obvious needs, however, little attention has been paid to the systematic gathering of information about groundwater resources in the past few decades with the result that data are patchy, knowledge is limited and investment is poorly targeted. This book was written to start to bridge the knowledge gap. The 29 chapters are written by a combination of practitioners and researchers mainly from within Africa using experience from recent and ongoing projects. The chapters highlight the complexity and variety of issues surrounding the development and management of groundwater resources across Africa and provide a snapshot of groundwater research and application in the early 21st century. Chapters range from strategic discussions of the role of groundwater in development and poverty reduction to case studies on techniques used to develop groundwater and modelling methods for managing groundwater systems.

Geology and Mineral Resources of West Africa Wright, 2012-12-06 In this text, attention is focused mainly on those literature is accessible; however, it is to be expected countries in western Africa lying south of the Sahara that teachers and lecturers will know of it and will be that is between about 5°N and 15°N and westward able to acquaint their students with it where necessary of about 15°E. Parts of the region as far north as about 20°N are considered from time to time. For a glossary of terms is provided at the end of the purposes of correlation and continuity. The map on volume and there is a summary at the beginning of p. xiii indicates the approximate extent of the cover. Each chapter begins with a summary. This book is dedicated to the many colleagues and The principal aim is to provide a broad view of students with whom we have worked in West Africa. West African geology as a whole for undergraduates and who have stimulated and encouraged our teaching who are studying for honours degrees in geology and engineering and research in various ways. We hope also that it may help the work of international organizations who already have an understanding of basic geological principles. It is increasingly important that such as AGID, CIFE, and UNESCO to encourage the growing trend towards geological co-operation. Geologists working in this region
