Bringing Fossils to Life Donald R. Prothero, 2013-11-12 The leading textbook in its field this work applies paleobiological principles to the fossil record while detailing the evolutionary history of major plant and animal phyla It incorporates current research from biology ecology and population genetics Written for biology and geology undergrads the text bridges the gap between purely theoretical paleobiology and solely descriptive invertebrate paleobiology books emphasizing the cataloguing of live organisms over dead objects This third edition revises art and research throughout expands the coverage of invertebrates includes a discussion of new methodologies and adds a chapter on the origin and early evolution of life U.S. Environmental Protection Agency Library System Book Catalog Holdings as of July 1973 United States. Environmental Protection Agency. Library Systems Branch, 1974

Organic Geochemistry Geoffrey Eglinton, Mary Teresa Joseph Murphy, 2013-11-11 For many years the subject matter encompassed by the title of this book was largely limited to those who were interested in the two most economically important organic materials found buried in the Earth namely coal and petroleum The point of view of any discussions which might occur either in scientific meetings or in books that have been written was therefore dominated largely by these interests A great change has occurred in the last decade This change had as its prime mover our growing knowledge of the molecular architecture of biological systems which in turn gave rise to a more legitimate asking of the question How did life come to be on the surface of the Earth A second motivation arose when the possibilities for the exploration of planets other than the Earth the moon Mars and other parts of the solar system became a reality Thus the question of the possible existence of life elsewhere than on Earth conceivably could be answered

Foundations of Macroecology Felisa A. Smith, John L. Gittleman, James H. Brown, 2014-08-22 Macroecology is an approach to science that emphasizes the description and explanation of patterns and processes at large spatial and temporal scales. Some scientists liken it to seeing the forest through the trees giving the proverbial phrase an ecological twist. The term itself was first introduced to the modern literature by James H. Brown and Brian A. Maurer in a 1989 paper and it is Brown's classic 1995 study Macroecology that is credited with inspiring the broad scale subfield of ecology. But as with all subfields many modern day elements of macroecology are implicit in earlier works dating back decades even centuries. Foundations of Macroecology charts the evolutionary trajectory of these concepts from the species area relationship and the latitudinal gradient of species richness to the relationship between body size and metabolic rate through forty six landmark papers originally published between 1920 and 1998. Divided into two parts Macroecology before Macroecology and Dimensions of Macroecology the collection also takes the long view with each paper accompanied by an original commentary from a contemporary expert in the field that places it in a broader context and explains its foundational role. Providing a solid coherent assessment of the history current state and potential future of the field Foundations of Macroecology will be an essential text for students and teachers of ecology alike.
