Brain/Mind Learning Principles in Action Renate Nummela Caine, Geoffrey Caine, Carol McClintic, Karl J.

Klimek, 2015-07-27 Raise the bar with the best of what is known about how the brain mind learns Higher order skills such as critical thinking planning decision making and persistence are the key to success for today's students Fully revised to respond to the Common Core and other timely developments this indispensable guide builds the bridge from brain research to classroom practice The updated third edition offers More strategies to deeply engage students and build foundational learning skills Guidance on peer based professional development through Process Learning Circles Reflective questions and checklists for assessing progress Updated real life examples Bridge research to practice through these innovative strategies to create a school environment where students and faculty learn and thrive *From Principles of Learning to Strategies for Instruction* Robert J. Seidel, Kathleen C. Perencevich, Allyson L. Kett, 2005 The purpose of this volume is to help educators and training developers to improve the quality of their instruction Unlike other books which have appeared so far this volume is not limited to a particular theoretical position Nor is it like many of the instructional design texts which ignore the learning literature Rather it draws upon any and all of those research based principles regardless of learning theory which suggest heuristics to guide instructional strategies The approach of the authors is unique in that they develop a framework or model taxonomy for tasks through which the principles of learning can be related to particular learning processes suggesting distinctive strategies for specific instructional tasks The authors present a four stage model that includes Acquisition Automaticity Near Term Transfer and Far Term Transfer The book is a practical guide for developing instructional strategies across the four principal domains cognitive affective psychomotor and interpersonal and is backed by empirically supported learning principles It is useful both to the experienced as well as the novice developer e g the student The current volume strikes a nice balance between theory and practice and provides a straightforward model of instruction that is easily connected with relevant research but equally easy to apply to instructional development projects The detailed treatment of the interpersonal domain and the emphasis on technology integration clearly distinguish the book as a modern treatment of instructional development that goes well beyond traditional instructional system development models Therefore this volume should provide a well grounded and useful tool for instructional developers From the Preface by Michael Spector Florida State University This book represents a major milestone in the literature on learning because it brings together research from the fields of psychology education and the training in a format which is highly useful to practitioners It will be very valuable to teachers trainers students and researchers alike Greg Kearsley University of Wisconsin Madison and UMUC University of Maryland
