Global Geomorphology Michael A. Summerfield, 2014-05-12 The plate tectonics revolution in the earth sciences has provided a valuable new framework for understanding long term landform development This innovative text provides a comprehensive introduction to the subject of global geomorphology with the emphasis placed on large scale processes and phenomena Integrating global tectonics into the study of landforms and incorporating planetary geomorphology as a major component the author discusses the impact of climatic change and the role of catastrophic events on landform genesis and includes a comprehensive study of surface geomorphic processes

Tropical Residual Soils Geological Society of London. Engineering Group. Working Party, 1997 In the tropics residual soils probably form the largest group with which the engineer has to deal Being formed in situ these soils have particular characteristics that distinguish them from material deposited from transported soils

Evacuation of Sediments from Reservoirs Rodney White, 2001 This book is concerned with one of the methods of removing sediments from reservoirs namely the flushing of sediments through purpose built outlet works within the dam This technique can be applied to existing dams with adaptation of the engineering works and to new dams The book gives practical guidance on the necessary hydrological hydraulic sedimentological and topographical features for successful flushing In this book the author draws together his wealth of experience of working in this field

Land Degradation and Society Piers Blaikie, Harold Brookfield, 2015-07-30 Why does land management so often fail to prevent soil erosion deforestation salination and flooding How serious are these problems and for whom This book first published in 1987 sets out to answer these questions which are still some of the most crucial issues in development today using an approach called regional political ecology This approach acknowledges that the reason why land management can fail are extremely varied and must include a thorough understanding of the changing natural resource base itself the human response to this and broader changes in society of which land managers are a part Land Degradation and Society is essential reading for all students of geography agriculture social sciences development studies and related subjects

Sand and Sandstone F. J. Pettijohn, Paul E. Potter, Raymond Siever, 2012-12-06 The first edition appeared fourteen years ago Since then there have been significant advances in our science that warrant an updating and revision of Sand and Sandstone The main framework of the first edition has been retained so that the reader can begin with the mineralogy and textural properties of sands and sandstones progress through their organization and classification and their study as a body of rock to consideration of their origin prove nance transportation deposition and lithification and finally to their place in the stratigraphic column and the basin The last decade has seen the rise of facies analysis based on a closer look at the stratigraphic record and the recognition of characteristic bed ding sequences that are the signatures of some geologic process such as a prograding shallow water delta or the migration of a point bar on an alluvial floodplain The environment of sand deposition is more closely determined by its place in such depositional systems than by criteria based on textural characteristics the fingerprint

approach Our revision reflects this change in thinking As in the geological sciences as a whole the concept of plate tectonics has required a rethinking of our older ideas about the origin and accumulation of sediments especially the nature of the sedimentary basins
