

2. PRINCIPLES, PHILOSOPHY PROCESSES AND OBJECTIVES OF EXTENSION

According to Mildred Horton (1952), the four great principles underlying extension services are:

1. The individual is supreme in democracy.
2. The home is a fundamental unit in a civilization.
3. The family is the first training group of the human race.
4. The foundation of any permanent civilization must rest on the partnership of man and the land.

Our objective in extension work is to help people reach higher levels of living-physically, mentally and spiritually. To reach these higher levels of living, people must be educated and trained to meet their responsibilities in relation to God, to their neighbours and to themselves. They must also know how to meet the responsibilities imposed by their environment. So we work with them as individuals, as families in the home, and with their environment.

Principles underlying the Philosophy of Extension

1. Extension is an organisation to plan, execute and evaluate programmes with the people, and not for the people.
2. Extension is an organisation set up to teach people and motivate them to action, not to dictate what people should do.
3. Extension should help people to help themselves.
4. Extension should be based on felt needs and enlightened desires of the people.
5. Extension should reach the people where they are.
6. Extension aims and objectives should not be rigid but it should be flexible (Time, date etc.)
7. Extension should change the people and not the subject matter.
8. Extension should work in harmony with the culture of the people.
9. Democratic procedures must be adopted in the formulation and execution of the programmes (group ideas only)

Principles Of Philosophy The:

The Principles of Philosophy Rene Descartes, 2019-01-09 Principles of Philosophy is a book by Rene Descartes It is basically a synthesis of the Discourse on Method and Meditations on First Philosophy It set forth the principles of nature the Laws of Physics as Descartes viewed them Most notably it set forth the principle that in the absence of external forces an object's motion will be uniform and in a straight line Newton borrowed this principle from Descartes and included it in his own Principia to this day it is still generally referred to as Newton's First Law of Motion The book was primarily intended to replace the Aristotelian curriculum then used in French and British Universities Descartes's use of the word philosophy in the title refers to natural philosophy which is what science was called at that time *René Descartes: Principles of Philosophy* René Descartes, 1984 Descartes's Principles of Philosophy is his longest and most ambitious work it is the only work in which he attempted to actually deduce scientific knowledge from Cartesian metaphysics as he repeatedly claimed was possible Whatever the success of this attempt there can be no doubt that it was enormously influential Cartesian celestial mechanics held sway for well over a century and some of the best minds of that period including Leibniz Malebranche Euler and the Bernoullis attempted to modify and quantify the Cartesian theory of vortices into an acceptable alternative to Newton's theory of universal gravitation Thus the Principles is not only of inherent and historical interest philosophically but is also a seminal document in the history of science and of 17th Century thought Principles of Philosophy was first published in Latin in 1644 In 1647 a French translation done by the Abbe Claude Picot and containing a great deal of additional material and a number of alterations in the original text was published with Descartes's enthusiastic approval Unlike some English translations of portions of the Principles this translation uses the Latin text as its primary source however a good deal of additional material from Picot's translation has been included There are several reasons for this First there is good evidence that Descartes himself was responsible for some of the additional material including of course the Preface to the French translation *René Descartes: Principles of Philosophy*, 2012-12-06 Descartes's Principles of Philosophy is his longest and most ambitious work it is the only work in which he attempted to actually deduce scientific knowledge from Cartesian metaphysics as he repeatedly claimed was possible Whatever the success of this attempt there can be no doubt that it was enormously influential Cartesian celestial mechanics held sway for well over a century and some of the best minds of that period including Leibniz Malebranche Euler and the Bernoullis attempted to modify and quantify the Cartesian theory of vortices into an acceptable alternative to Newton's theory of universal gravitation Thus the Principles is not only of inherent and historical interest philosophically but is also a seminal document in the history of science and of 17th Century thought Principles of Philosophy was first published in Latin in 1644 In 1647 a French translation done by the Abbe Claude Picot and containing a great deal of additional material and a number of alterations in the original text was published with Descartes's enthusiastic approval Unlike some English translations of portions of the Principles this translation uses the

Latin text as its primary source however a good deal of additional material from Picot's translation has been included There are several reasons for this First there is good evidence that Descartes himself was responsible for some of the additional material including of course the Preface to the French translation *The Principles of Philosophy* Rene Descartes, 2017-02-24 finished as to lead me to expect that the work will be more generally read in French than in Latin and better understood The only apprehension I entertain is lest the title should deter some who have not been brought up to letters or with whom philosophy is in bad repute because the kind they were taught has proved unsatisfactory and this makes me think that it will be useful to add a preface to it for the purpose of showing what the MATTER of the work is what END I had in view in writing it and what UTILITY may be derived from it But although it might be my part to write a preface of this nature seeing I ought to know those particulars better than any other person I cannot nevertheless prevail upon myself to do anything more than merely to give a summary of the chief points that fall as I think to be discussed in it and I leave it to your discretion to present to the public such part of them as you shall judge proper I should have desired in the first place to explain in it what philosophy is by commencing with the most common matters as for example that the word PHILOSOPHY signifies the study of wisdom and that by wisdom is to be understood not merely

Principles of Philosophy Rene Descartes, 2012-12-17 In essence it is a synthesis of the Discourse on Method and Meditations on First Philosophy It was written in Latin published in 1644 and dedicated to Elisabeth of Bohemia with whom Descartes had a long standing friendship A French version *Les Principes de la Philosophie* followed in 1647
