Narratology beyond the Human David Herman,2018-03-01 To what extent and in what manner do storytelling practices accommodate nonhuman subjects and their modalities of experience and how can contemporary narrative study shed light on interspecies interactions and entanglements In Narratology beyond the Human David Herman addresses these questions through a cross disciplinary approach to post Darwinian narratives concerned with animals and human animal relationships Herman considers the enabling and constraining effects of different narrative media examining a range of fictional and nonfictional texts disseminated in print comics and graphic novels and film In focusing on techniques such as the use of animal narrators alternation between human and nonhuman perspectives the embedding of stories within stories and others the book explores how specific strategies for portraying nonhuman agents both emerge from and contribute to broader attitudes toward animal life Herman argues that existing frameworks for narrative inquiry must be modified to take into account how stories are interwoven with cultural ontologies or understandings of what sorts of beings populate the world and how they relate to humans Showing how questions of narrative bear on ideas of species difference and assumptions about animal minds Narratology beyond the Human underscores our inextricable interconnectedness with other

forms of creatural life and suggests that stories can be used to resituate imaginaries of human action in a more than human world Avian Architecture Revised and Expanded Edition Peter Goodfellow, 2024-02-13 The essential illustrated guide to how birds design and build their nests now fully revised and expanded Birds are the most consistently inventive builders and their nests set the bar for functional design in nature Describing how birds design engineer and build their nests Avian Architecture deconstructs all types of nests found around the world using architectural blueprints and detailed descriptions of the construction processes and engineering techniques birds use This spectacularly illustrated book features more than 300 full color images and more than 40 case studies that profile key species worldwide Each chapter covers a different type of nest from tunnel nests and mound nests to floating nests hanging nests woven nests and even multiple nest avian cities Other kinds of avian construction such as bowers and food stores are also featured Now with more case studies and an updated foreword this revised and expanded edition includes intricate step by step sequences visual spreads on nest building materials and methods and insightful commentary by a leading expert Illustrates how birds around the world design engineer and build their nests Features architectural blueprints step by step sequences visual spreads on nest building materials and methods and expert commentary Includes more than 300 full color images Covers more than 100 bird species worldwide
