Radioactive Fallout After Nuclear Explosions And Accidents:

Radioactive Fallout after Nuclear Explosions and Accidents Y.A. Izrael, 2002-06-20 To achieve successful solutions to the problems resulting from local distant and global radioactive fallout after nuclear explosions and accidents and to achieve successful retrospective analyses of the radiation conditions from recent observations certain information is needed the distribution of the exposure dose rate in the atmosphere and in a country the distribution of radionuclides in natural environments and the nuclide composition of the radioactive fallout the features of formation of the aerosol particle carriers of the radioactivity and of the nuclide distribution of the particles of different sizes formed under different conditions the processes involved in the migration of radioactive products in different zones and environments the external and internal effects of nuclear radiation on human beings This monograph is devoted to a number of these problems namely to studies of the radioactive fallout composition the formation of the aerosol particles that transport the radioactive products and to the analysis of the external radiation doses resulting from nuclear explosions and or accidents Problems of restoration and rehabilitation of contaminated land areas are also touched upon in the monograph To solve such problems one requires knowledge of the mobility of radionuclides an understanding of their uptake by plants their transportation within the food chain and finally their uptake by animal and or human organisms The results of many years of study of radioactive fallout from atmospheric and underground nuclear explosions and accidents are summarized in this book It is intended for various specialists geophysicists ecologists health experts and inspectors as well as those who are concerned with radioactive contamination of natural environments

Radioactivity Michael Wiescher, 2025-01-16 This book provides an accessible introduction to radioactivity The second in a two volume set this volume is presented in two parts covering its development and modern applications It first explores the development and applications of technically enhanced natural radioactivity TENR and addresses nuclear energy sources the fission and fusion processes and the issues of radioactive fallout from nuclear weapon use and test programs Later chapters explore the cutting edge medical applications of radioactive materials in diagnostics and therapy exploring nuclear medicine technologies such as x ray tomography brachytherapy and positron emission tomography PET They also detail the broad range of applications of radioactive materials in industrial production processes in the sterilization of tools and materials in the medical and the food industries and in the analysis of art and archaeological material to analyse paintings and painting techniques to identify fakes and forgeries The book concludes with a discussion of the societal impact and understanding of radioactivity alongside detailing the underlying reasons for its negative preconceptions and the possible mitigation of these through better education and information practices This book will be of interest to non science undergraduate and physics graduate students alike as well as to interested lay people looking for an introduction to radioactivity Key Features Written in an accessible style to be understood by readers without a formal scientific education Highly illustrated throughout Authored by an expert in the field drawing from decades of

experience in experimental nuclear physics **Biological Environmental Science** William V Dashek, 2019-04-29 Biological Environmental Science is an introductory textbook for undergraduate students who desire a one semester course or alternatively a springboard course for advanced environmental offerings This book features timely issues such as global warming air ground and water pollutions population growth species extinction and environmental poli **Air Pollution Modeling and its Application XVIII** Carlos Borrego, Eberhard E. Renner, 2011-09-22 Recent developments in air pollution modeling are explored as a series of contributions from researchers at the forefront of their field This book on air quality modeling and its applications is focused on local urban regional and intercontinental modeling data assimilation and air quality forecasting model assessment and validation aerosol transformation the relationship between air quality and human health and the effects of climate change on air quality It consists of a series of papers that were presented at the 28th NATO CCMS Conference on Air Pollution Modeling and its Application held in Leipzig Germany May 15 19 2006 It is intended as reference material for students and professors interested in air pollution modeling at the graduate level as well as researchers and professionals involved in developing and utilizing air pollution models Discusses cutting edge developments on air pollution modeling and air quality issues Presents topical and highly relevant subjects to the air quality and modeling research community Provides material that can be used to further improve air quality modeling and to inform the community about recent and novel developments in the field **The Radiation Legacy of the Soviet Nuclear Complex** Nikolai N. Egorov, Vladimir M. Novikov, Frank L. Parker, Victor K. Popov, 2014-04-08 A study of the legacy of nuclear contamination in the Soviet Union It gives the location and characteristics of the accumulated radioactive material and wastes by each sector from ore and mining to use and disposal It describes types of storage capacity and utilization age and location It gives information on the territories and locations contaminated by normal operations and by accidents from which strategic plans for remediation can be formulated **Global Studies Directory**, 2017-10-02 Publication of the Global Studies Directory represents an unprecedented project in world practice Based on the professional assessment by a large international team of experts the Directory offers information on the most well known scholars political and public figures who have made outstanding contributions to the establishment and development of global studies or made a fundamental impact on the formation of global world The Directory also contains comprehensive information about organizations periodicals and special literature of direct relevance to the theory and practice of globalization and fully demonstrates the state of affairs in the field of study on a global level This project is a continuation of many years of research which first resulted in the publication of the Global Studies Encyclopedic Dictionary the companion publication to the Directory *Radiation Exposure and Occupational Risks* Eberhard Scherer, Christian Streffer, Klaus-Rüdiger Trott, 2012-12-06 The aim of radiation protection standards is to make the radiation workplace as safe as is humanly possible The gradual evolution over the last 20 years has been towards a more precise definition of the limits for occupational exposure These have been created not only in terms of short term

effects but also more importantly in terms of long term risks involving such problems as the potential for carcinogenesis and genetic change In the United States the National Committee for Radiation Protection has recommended that 5 rems 50 mSv should remain as the maximum permissible dose equivalent for total body exposure This would represent the sum of internal and external exposure and should be regarded as the upper limit allowed The community of radiation users is required to conduct its operations in such a manner that the absolute value of the individual's dose equivalent in rems does not exceed his age in years There should be additional limits for tissues and organs based on short term effects Therefore individual organs are limited to dose equivalents low enough to ensure that the dose threshold values are not exceeded

Analysis of Environmental Radionuclides Pavel P. Povinec, 2011-07-28 The purpose of this book is to present a state of art summary of current knowledge of methods of assessment of radionuclides in the terrestrial and marine environments It covers the traditional methods of radioactivity measurements such as radiometrics techniques but also recent developments in the mass spectrometry sector The book starts with a short preface introducing the subject of the book summarising content and philosophy of the book as well as the most important historical achievements The scientific topics are introduced by description of sampling methods optimisation of sampling sites and sampling frequency The recent developments in radiochemical separation methods using chromatography resins for the treatment of actinides transuranics and other groups of radioelements are also described No other book is available covering all aspects of environmental radioactivity measurements although remarkable progress has been made in detection techniques over the last ten years At present the new methods enable to carry out investigations which were not possible before either because of lack of sensitivity or because of the fact that they required too large samples

Nuclear Test Explosions, Scope 59 International Council for Science, 2000-04-14 Nuclear Test Explosions Environmental and Human Impacts Edited by Sir Frederick Warner University of Essex UK and Rene J C University of Liege Belgium Nuclear Test Explosions summarises the findings of the international project SCOPE RADTEST Scientific Committee on Problems of the Environment RADIATION from nuclear TEST explosions on the environmental and human impacts of nuclear tests The location and dates of 730 explosions and the 2419 tests performed between 1945 and 1998 are given followed by discussion of their effects The nuclear test sites include Nevada Semipalatinsk Novaya Zemlya South Pacific Australia and Lob Nor The fallout from 541 atmospheric tests and effects on human health and environment are assessed and the development of nuclear weapons is described The contents of the book have been assembled by a team of experts and should greatly assist in the discussion of weapons limitation
