special light The special light had a purpose It was created for such a time as this The purpose carried a good intent but some devilry had diluted and dispersed the good intent It was remembered by those occasions when rainbows arched the sky The rainbows appeared less to men and others forgot But most men had forgotten the purpose of the rainbows reminder and most men and others had never known the purpose of the special light It was always known by a few that such a time as this would come The few intent on good feared the coming of such a time Now the greater number who were evil were aware that the time or a time had come They were at first unaware that the special light might reconvene as a whole and that the white power of the whole might thwart their intent These others were not men not human Though they had mans outward appearance most were subhuman some were superhuman Evil intent rested with the superhuman but to them the intent was not evil just inevitable Only those carried upon the waves of the special light had the energy to combat the evil intent and then it was only when they came together

Food losses and waste in primary production Hartikainen, Hanna ,Svanes, Erik ,Franke, Ulrika ,Mogensen, Lisbeth ,2017-02-22 This report presents the results from six case studies of food losses and waste in primary production in the Nordic region The product groups studied were carrots onions cereal wheat or rye green peas field peas and cultivated fish rainbow trout or char We used different methods to study the side flows questionnaires in field measurements and interviews Instead of the term food losses and waste we use the term side flows The side flow ranged from 4 % to 31 % for vegetables cereals and pulses and most of the side flow for occurs after harvest e g when sorting and storing the products The main reason for side flow is quality issues Weather conditions and diseases have a major impact on the quality of the products We cannot draw many conclusions on side flow amounts for fish based on the results The reasons for fish side flow are mainly diseases and predators

Selective Breeding in Aquaculture: an Introduction Trygve Gjedrem,Matthew Baranski,2010-03-17 The foundation of quantitative genetics theory was developed during the last century and facilitated many successful breeding programs for cultivated plants and t restrial livestock The results have been almost universally impressive and today nearly all agricultural production utilises genetically improved seed and animals The aquaculture industry can learn a great deal from these experiences because the basic theory behind selective breeding is the same for all species The rst published selection

experiments in aquaculture started in 1920 s to improve disease resistance in sh but it was not before the 1970 s that the rst family based breeding program was initiated for Atlantic salmon in Norway by AKVAFORSK Unfortunately the subsequent implementation of selective breeding on a wider scale in aquaculture has been slow and despite the dramatic gains that have been demonstrated in a number of species less than 10% of world aquaculture production is currently based on improved stocks For the long term sustainability of aquaculture production there is an urgent need to develop and implement e cient breeding programs for all species under commercial production The ability for aquaculture to successfully meet the demands of an ever increasing human p ulation will rely on genetically improved stocks that utilise feed water and land resources in an ef cient way Technological advances like genome sequences of aquaculture species and advanced molecular methods means that there are new and exciting prospects for building on these well established methods into the future
