, 1983 Clinical and Biological Basis of Lung Cancer Prevention Yves Martinet, F.R. Hirsch, J. Mulshine, J.M.

Vignaud, 2012-12-06 Lung cancer is a disease with pandemic public health implications as it is now the leading cause of cancer mortality throughout the world This book results from two recent International Association for the Study of Lung Cancer IASLC Workshops on lung cancer prevention It strikes a balance between considering public health approaches to tobacco control and population based screening advances in clinical evaluation of chemoprevention approaches and the biology of lung carcinogenesis Indeed while the science of smoking cessation is evolving as new pharmacological tools are moving into clinical evaluation the current impact of molecular diagnostics is profound The rapidly evolving diagnostic technologies are revolutionizing basic scientific investigation of cancer and this trend is expected to soon spill over into the clinical practice of medicine The evolution of economical diagnostic platforms to allow for direct bronchial epithelial evaluation in high risk populations promises to improve the diagnostic lead time for this disease The hope is that enough progress will occur to permit lung cancer detection in advance of clinical cancer so that the disease can be addressed early on while it is still confined to the site of origin Chemoprevention which is designed to intervene in the early phase of carcinogenesis prior to any subjective clinical manifestation of a cancer is also generating greater research interest Moreover the benefit of aerosolized administration of chemoprevention agents over conventional oral administration has strong appeal and may result in the reduction of the incidence of cancer when combined with new diagnostic technologies

Autoimmune Aspects of Lung Disease D.A. Isenberg, S. Spiro, 2012-12-06 The lung forms an integral part of the body's immune system and is subject to a range of diseases which are either autoimmune in nature or have clear cut immunological abnormalities *Autoimmune Aspects of Lung Disease* provides a concise review of the lung's role in the immune system and a detailed account of both primary and secondary lung diseases which are characterised by immunological perturbation or frank autoimmunity The volume presents a detailed up to date account of disorders ranging from infection to neoplasia and is written in both an informative and stimulating style by a prestigious group of authors The chapters are extensively referenced and provide numerous insights into the aetiopathogenesis and clinical features and treatment of immunologically linked pulmonary disease The book is intended as both an overview for physicians and scientists with an established interest in diseases of the lung immunologists seeking to learn more about relevant disorders in the lung and general physicians whether specialists or in training seeking to enrich their knowledge of the links between the pulmonary and immune systems
