Organizations and Strategies in Astronomy 7 Andre HECK, 2007-09-18 Astronomy is the most ancient science humans have practiced on Earth It is a science of extremes and of large numbers extremes of time from the big bang to infinity of distances of temperatures of density and masses of magnetic field etc It is a science which is highly visible not only because stars and planets are accessible in the sky to the multitude but also because the telescopes themselves are easily distinguishable usually on top of scenic mountains and also because their cost usually represent a substantial proportion of the national budget and of the taxpayers contribution to that budget As such astronomy cannot pass unnoticed It touches on the origins of matter of the Universe where we live on life and on our destiny It touches on philosophy as well as on religion Astronomy is the direct contact of humankind with its origins and the immensity of universal nature It is indeed a science of observation where experimentation is practically possible and which is ruled by mathematics physics chemistry statistical analysis and modelling while offering the largest number of verifications of the most advanced theories of fundamental physics such as general relativity and gravitation At the beginning of the 21 century astronomy is clearly a multidisciplinary activity touching on all aspects of science It is therefore logical that in the past and still now astronomy has attracted the most famous scientists be they pure observers mathematicians physicists biologists experimentalists and even politicians

Doing the Impossible Arthur L. Slotkin, 2012-07-26 Apollo was known for its engineering triumphs but its success also came from a disciplined management style This excellent account of one of the most important personalities in early American human spaceflight history describes for the first time how George E Mueller the system manager of the human spaceflight program of the 1960s applied the SPO methodology and other special considerations such as all up testing resulting in the success of the Apollo Program Wernher von Braun and others did not readily accept such testing or Mueller's approach to system management but later acknowledged that without them NASA would not have landed astronauts on the Moon by 1969 While Apollo remained Mueller's priority from his earliest days at the agency he promoted a robust post Apollo Program which resulted in Skylab the Space Shuttle and the International Space Station As a result of these efforts Mueller earned the sobriquet the father of the space shuttle Following his success at NASA Mueller returned to industry Although he did not play a leading role in human spaceflight again in 2011 the National Air and Space Museum awarded him their lifetime achievement trophy for his contributions Following the contributions of George E Mueller in this unique book Arthur L Slotkin answers such questions as exactly how did the methods developed for use in the Air Force ballistic missile programs get modified and used in the Apollo Program How did George E Mueller with the help of others manage the Apollo Program How did NASA centers coming from federal agencies with cultures of their own adapt to the new structured approach imposed from Washington George E Mueller is the ideal central character for this book He was instrumental in the creation of Apollo extension systems leading to Apollo the Shuttle and today's ISS and thus was a pivotal figure in early American human spaceflight history
