REALGAR

An important ore of arsenic, realgar is bright red or orange in color. Crystals are not often found, but when they occur they are short, prismatic, and striated. Realgar mostly occurs as coarse to fine granular masses and as encrustations. Realgar disintegrates on prolonged exposure to light, forming an opaque yellow powder, which is principally pararealgar. Therefore, specimens are kept in darkened containers.

Realgar is typically found in hydrothermal deposits at low temperature (up to 400°F/200°C) often with orpiment (p.59) and other arsenic minerals. It also forms as a sublimate around volcanoes, hot springs, and geyser deposits and as a weathering product of other arsenic-bearing minerals. Realgar is often found with stibnite (p.61) and calcite (p.114).

**Powdered realgar**

Scarlet to orange-yellow in color, powdered realgar was once used as a pigment and in fireworks.

Livingstone,2014-05-15 How was Darwin s work discussed and debated among the same religious denomination in different locations Using place politics and rhetoric as analytical tools historical geographer David N Livingstone investigates how religious communities sharing a Scots Presbyterian heritage engaged with Darwin and Darwinism at the turn of the twentieth century His findings presented as the prestigious Gifford Lectures transform our understandings of the relationship between science and religion The particulars of place whether in Edinburgh Belfast Toronto Princeton or Columbia South Carolina shaped the response to Darwin s theories Were they tolerated repudiated or welcomed Livingstone shows how Darwin was read in different ways with meaning distilled from Darwin s texts depending on readers own histories their literary genealogies and cultural preoccupations That the theory of evolution fared differently in different places Livingstone writes is exactly what Darwin might have predicted As the theory

diffused it diverged Dealing with Darwin shows the profound extent to which theological debates about evolution were rooted in such matters as anxieties over control of education the politics of race relations the nature of local scientific traditions and challenges to traditional cultural identity In some settings conciliation with the new theory even endorsement was possible demonstrating that attending to the specific nature of individual communities subverts an inclination to assume a single relationship between science and religion in general evolution and Christianity in particular Livingstone concludes with contemporary examples to remind us that what scientists can say and what others can hear in different venues differ today just as much as they did in the past The Salt Lake Mining Review ,1917 **Rocks and Minerals** Peter Zodac,1926 Opal bibliography by G Frederick Shepherd v 8 p 51 60 **Intermountain Industry and Engineering** ,1918
