Role Of The Plasminogen Activator/plasmin Pathway In Bone Metabolism:

The Role of the Plasminogen Activator/Plasmin Pathway in Bone Metabolism Evis Daci,2000-12-01 *Plasminogen: Structure, Activation, and Regulation* David M. Waisman,2012-12-06 This volume showcases the most important developments in the area of plasminogen regulation The book is composed of about 16 chapters dealing with a range of topics including the mechanisms of activation of plasminogen the structure of plasminogen and plasminogen activators the role of plasminogen in various physiological and pathological processes such as tumor growth and progression wound healing and fibrinolysis and the interrelationship of the plasmin MMP proteolytic systems **The Clipped Microvascular Anastomosis** Oliskevicius Darius,2004 This is a Ph D dissertation The sutured vascular and microvascular anastomosis technique remains a standard procedure nowadays There is an increasing demand for ergonomic cost effective and reliable alternatives though This interest is revitalized b **Extracorporeal Shock Wave Therapy in Chronic Achilles and Patellar Tendinopathy** Koen Peers,2003-09 Drug Eluting Stents Yanming Huang,2003-11 This is a Ph D dissertation Role of Inflammation in the Pathogenesis of Restenosis Local Drug Delivery Using Drug Eluting Stents In Vitro Stent Implantation Optimization of Local Methylprednisolone Delivery to Inhibit Inflammatory Reaction and Neointimal Hyperplasia of Coated Coronary Stents Cytochalasin Polymer Coated Stents Reduce Neointimal Formation in a Porcine Coronary Model Long Term Biocompatibility Evaluation of a Biodegradable Polymer Coated Stent in a Porcine Coronary Stent Model Methotrexate Loaded SAE Coated Coronary Stents Reduce Neointimal Hyperplasia in a Porcine Coronary Model Local Methylprednisolone Delivery Using a Biodivysio Phosphorycholine Coated Drug Delivery Stents Reduces Inflammation and Neointimal Hyperplasia in a Porcine Coronary Stent Model Stent Based Dexamethasone Delivery From Pre Clinical Data to the Stride Trial General Discussions and Conclusions Protein Phosphatase-1 Binding Motifs Paulina Wakula,2006 *NuSAP, a Novel Microtubule-Associated Protein (MAP) involved in Mitotic Spindle Organization* Tim Raemaekers,2003-09 Vitamin D and bone Linking the fields of vitamin D and bone with those of the nucleus and mitotic spindle Nucleus structure and dynamics Organization of the nucleus Microtubules and associated proteins Mitosis and spindle assembly Control and mechanism of spindle formation and dynamics Materials and methods NuSAP and novel MAP involved in spindle organization NuSAP expression in cultured osteoblasts regulation during development and by 1 25 dihydroxyvitamin D3 Analysis of NuSAP gene expression at the tissue level and chromosomal localization of human and mouse NuSAP Developmentally regulated expression of NuSAP in the rat testis and mouse embryo Chromosomal localization of human and mouse Nusap General discussion and perspectives **Quantification of Regional Myocardial Deformation. Normal Characteristics and Clinical Use in Ischaemic Heart Disease** Lieven Herbots,2006 Functional Anatomy of Visual Processing in the Cerebral Cortex of the Macaque Koen Nelissen,2006 In this thesis we examined the monkey cortical regions involved in processing of color visual motion information and the recognition of actions done by others The aim was to gain better

insight in the functional organization of the monkey visual cortex using in house developed functional imaging techniques Two different functional imaging techniques were used in these studies the double label deoxyglucose technique DG and functional magnetic resonance imaging fMRI in the awake monkey Chapter 2 Both techniques allow to obtain an overview of stimulus related neural activity throughout the whole brain integrated over a limited amount of time The results of the color experiments Chapter 3 clearly showed that color related information is processed within a group of areas belonging to the ventral stream which is involved in the perception of objects Color related metabolic activity was observed in visual areas V1 V2 V3 V4 and inferotemporal cortex area TEO and TE These findings set to rest the longstanding controversial claims that color would be processed almost selectively in one extrastriate visual area V4 Zeki SM Brain Res 1973 53 422 427 These results also show the usefulness of whole brain functional mapping techniques as a complimentary approach to single cell measurements In Chapter 4 we investigated which regions in the superior temporal sulcus STS of the monkey are involved in the analysis of motion While the caudal part of the STS has been studied extensively including area MT V5 and MST little is known about motion sensitivity in more anterior ventral STS regions Using fMRI we were able to localize and delineate six different motion sensitive regions in the STS One of these regions that we termed 1st lower superior temporal had not been described so far We were able to further characterize the six motion sensitive regions using a wide variety of motion sensitivity tests The results of the latter tests suggested that motion related information might be processed along a second pathway within the STS in addition to the MT MST path which is involved in the perception of heading This second pathway which includes the more rostral motion sensitive STS regions FST 1st and STPm is possibly involved in the visual processing of biological movements movements of animate objects and actions Finally we investigated how and where in the monkey brain visual information about actions done is processed Chapter 5 and 6 We found Chapter 5 that in agreement with earlier single unit results the observation of grasping movements activates several regions in the premotor cortex of the monkey Remarkable is that these premotor regions predominantly have a motor function coding different types of higher order motor acts for instance grasping of an object These results are in agreement with earlier suggestions that we are able to understand actions done by others because observation of a particular motor act activates our own motor representation of the same act Furthermore these studies suggested that within the frontal cortex of the monkey there is a distinction between context dependent a person grasping and more abstract a hand grasping action representations In Chapter 6 we studied two other regions which are involved in the processing of visual information of actions done by others the superior temporal sulcus STS and the parietal cortex In the parietal cortex we found a similar distinction between context dependent and more abstract action representations as observed in prefrontal cortex These results suggest that the parietal cortex is not only involved in the visual control of action planning but also in the visual processing of actions performed by others Based upon anatomical connections between the STS parietal and frontal regions and motion form and action related functional

properties of the former regions we tentatively suggest how information about actions done by others might be sent from the STS to the frontal cortex along three different pathways The latter working hypothesis will be tested in the future by additional fMRI control experiments and by combining fMRI inactivation and microstimulation experiments while monkeys perform grasping tasks and or view actions performed by others
