Role In Disease Pathogenesis And Prevention Vol 2 Programmed Cell Death:

Pathogenesis of Neurodegenerative Disorders Mark P. Mattson, 2001-06-01 As the average life expectancy of many populations throughout the world increases so to does the incidence of such age related neurodegenerative disorders as Alzheimer s Parkinson s and Huntington s diseases Rapid advances in our understanding of the molecular genetics and environmental factors that either cause or increase risk for age related neurodegenerative disorders have been made in the past decade The ability to evaluate at the cellular and molecular level abnormalities in postmortem brain tissue from patients when taken together with the development of valuable animal and cell culture models of neurodegenerative disorders has allowed the identification of sequences of events within neurons that result in their demise in specific neurodegenerative disorders Though the genetic and environmental factors that promote neurodegeneration may differ among disorders shared biochemical cascades that will ultimately lead to the death of neurons have been identified These cascades involve oxyradical production aberrant regulation of cellular ion homeostasis and activation of a stereotyped sequence of events involving mitochondrial dysfunction and activation of specific proteases Pathogenesis of Neurodegenerative Disorders provides a timely compilation of articles that encompasses fundamental mechanisms involved in neurodegenerative disorders In addition mechanisms that may prevent age related neurodegenerative disorders are presented Each chapter is written by an expert in the particular neurodegenerative disorder or mechanism or neuronal death discussed Advances in the

Scott, 2013-06-29 This volume contains papers that were presented and discussed at The 1996 International Symposium on Programmed Cell Death which was held in the Shanghai Science Center of the Chinese Academy of Sciences on September 8-12 1996 Apoptosis has attracted great attention in the past several years This is reflected in part by the exponential increase in the number of papers published on the subject While several major scientific conferences have been held in recent years this meeting represents the first major international scientific meeting on programmed cell death held in Asia where fast economic growth promises a bright future for both basic and applied research in biomedical sciences We organized the meeting with the belief that such a gathering would foster a closer interaction between scientists from the West and those in Asia Research on programmed cell death has expanded so extensively that no one meeting can cover all the important subjects related to apoptosis The Shanghai meeting focused on several key areas ranging from well established ones such as cell death in the immune system to emerging ones such as the role of ECM in regulating cell fate Specifically the subjects presented and discussed included programmed cell death during development the regulation and biochemical mechanisms of lymphocyte apoptosis the involvement of extracellular matrix and its remodeling in programmed cell death genes that cause or prevent cell death and the application of apoptosis toward cancer therapy **Programmed Cell Death** Mark Paul Mattson, Steven Estus, Vivek Rangnekar, 2001 *Autophagy:*

Cancer, Other Pathologies, Inflammation, Immunity, Infection, and Aging M. A. Hayat, 2013-09-03 Autophagy Cancer Other Pathologies Inflammation Immunity Infection and Aging is a complete authoritative examination of the role of autophagy in health and disease Understanding this phenomenon is vital for the studies of cancer aging neurodegeneration immunology and infectious diseases Comprehensive and forward thinking this four volume work offers a valuable guide to cellular processes while encouraging researchers to explore their potentially important connections Understanding the role of autophagy is critical considering its association with numerous biological processes including cellular development and differentiation cancer both antitumor and protumor functions immunity infectious diseases inflammation maintenance of homeostasis response to cellular stress and degenerative diseases such as Alzheimer s Parkinson s Huntington s amyotrophic lateral sclerosis and prion diseases Cell homeostasis is achieved by balancing biosynthesis and cellular turnover In spite of the increasing importance of autophagy in various pathophysiological conditions mentioned above this process remains underestimated and overlooked As a consequence its role in the initiation stability maintenance and progression of these and other diseases e g autoimmune disease remains poorly understood This work will broaden the knowledge base of academic and clinical professors post doctoral fellows graduate and medical students regarding this vital biological process Volumes in the Series Programmed Cell Death and Cardiovascular Disease Zhi Qi, Rongxue Wu, Xiongwen Chen, Zhiqiang Lin, 2022-09-12

Non-Coding RNAs and Human Diseases, volume II: Long Non-Coding RNAs (lncRNAs) and Pathogenesis of Human Disease Yujing Li, Liqi Shu, Shunliang Xu, Zhao-Qian Teng, Cuida Meng, 2024-11-06 Long non coding RNAs lncRNAs are defined as transcripts longer than 200 nucleotides rarely translatable into protein which distinguishes them from small non coding RNAs sncRNAs such as miRNAs siRNAs piRNAs snoRNAs exRNAs scaRNAs Long intervening intergenic noncoding RNAs lincRNAs refer to lncRNA non overlapped to protein coding genes In terms of abundance and specificity 30 000 lncRNAs have been identified in human tissues with 10 fold lower abundance than mRNA Near 80% of lncRNAs show tissue specific features in contrast to only less than 20% of mRNAs In addition to tissue specificity lncRNAs are also characterized by having significantly higher developmental stage specificity Of the identified lncRNAs although only a very small proportion have been validated to be biologically relevant the emerging evidence has confirmed important regulatory functions at levels of transcription post transcription and epigenetic control Physiologically lncRNAs are involved in growth development reproduction aging and pathogenesis of disease initiation and progression such as neurological disorders and cancers The Belt and Road of Animal Diseases Shao-Lun Zhai, Feng Li, 2022-01-05

Toxicology is the study of the adverse effects of chemical physical or biological agents on people animals and the environment Toxicologists are trained to investigate interpret and communicate the nature of those effects Over the last ten years the subject of toxicology has changed dramatically moving from a discipline which was once firmly wedded to traditional methods to one which is keen to embrace the innovative techniques emerging from the developing fields of cell culture and molecular biology There is an acute need for this to be reflected in a paradigm shift which takes advantage of the opportunities offered by modern developments in the life sciences including new in vitro and in silico approaches alternative whole organism non mammalian models and the exploitation of omics methods high throughput screening HTS techniques and molecular imaging technologies This concise accessible introduction to the field includes the very latest concepts and methodologies It provides MSc PhD and final year undergraduate students in pharmacy biomedical and life sciences as well as individuals starting out in the cosmetics consumer products pharmaceutical and testing industries with everything they need to know to get to grips with the fast moving field of toxicology and the current approaches used in the risk assessment of drugs and chemicals **Advances in Stem Cell Technology to Model and Treat Diabetes** Holger Andreas Russ,Timo Otonkoski,Shuibing Chen,2022-05-31

Apoptosis and Beyond, 2 Volume Set James A. Radosevich,2018-12-27 These volumes teach readers to think beyond apoptosis and describes all of the known processes that cells can undergo which result in cell death This two volume source on how cells dies is the first comprehensive collection to cover all of the known processes that cells undergo when they die It is also the only one of its kind to compare these processes It seeks to enlighten those in the field about these many processes and to stimulate their thinking at looking at these pathways when their research system does not show signs of activation of the classic apoptotic pathway In addition it links activities like the molecular biology of one process eg Necrosis to another process eg apoptosis and contrasts those that are close to each Volume 1 of Apoptosis and Beyond The Many Ways Cells Die begins with a general view of the cytoplasmic and nuclear features of apoptosis It then goes on to offer chapters on targeting the cell death mechanism microbial programmed cell death autophagy cell injury adaptation and necrosis necroptosis ferroptosis anoikis pyronecrosis and more Volume 2 covers such subjects as phenoptosis pyroptosis hematopoiesis and eryptosis cyclophilin d dependent necrosis and the role of phospholipase in cell death Covers all known processes that dying cells undergo Provides extensive coverage of a topic not fully covered before Offers chapters written by top researchers in the field Provides activities that link and contrast processes to each other Apoptosis and Beyond The Many Ways Cells Die will appeal to students and researchers clinicians in cell biology molecular biology oncology and tumor biology *Community Series in Targeting Signalling Pathways in*

Inflammatory Diseases, volume II Uzma Saqib, Mirza S. Baig, Syed Faisal, Suraj P. Parihar, 2025-08-18 Protein protein interactions PPIs are involved in almost every cellular process They represent attractive targets for modulating signaling pathways leading to disease states However they are challenging to target with small molecules peptides for example due to varied reasons Although a growing number of PPIs have become validated drug targets there is only a little percentage of them have been used to successfully design potent drugs PPIs play an important role in signaling events leading to inflammation Many inflammatory diseases are solely based on specific signaling pathways inside the cells which are in turn driven by a prior event of a protein protein interaction or several protein protein interactions It has been clearly shown by many investigators across the world that targeting such interactions would be the best way to attenuate the signaling events and eventually the inflammation In the last few years various PPIs modulators have entered clinical studies some of which have been approved for marketing strengthening our idea that modulators targeting PPIs have broad prospects in clinical research The conventional methods using medicinal chemistry protocols are less effective and time consuming for designing and identifying PPI modulators Thus it is necessary to develop more effective approaches for screening the PPI modulators A wide variety of strategies including High throughput screening HTS in silico modeling and the most recent Artificial Intelligence AI could multiply the results in terms of time and effort We would like to invite potential authors researching on topics associated with studies focused on the role of protein protein interactions as well as targeting those in inflammatory signaling leading to multiple diseases including sepsis etc Articles specifically encompassing the following are welcome 1 Artificial Intelligence AI in PPI based drug discovery in immune mediated inflammatory disease 2 Novel cell based high output assays for quicker screening of novel drugs against PPI s in immune mediated inflammatory disease 3 Novel PPI s and their therapeutic targeting in inflammation and sepsis Please note Bioinformatics or Computational Analysis of public genome or transcriptome databases need to be accompanied by robust and relevant validation to be submitted to this section Manuscripts describing the pharmacological action of drugs used in traditional medicine in models of disease are not in scope of this Research Topic unless they have a strong focus on the immune system This Research Topic is the second volume of the Community Series in Targeting Signalling Pathways in Inflammatory Diseases Please see the first volume here
