Lore Capturing Traditional Environmental Knowledge:

   Lore Martha Johnson,1992 This book examines the process of collecting traditional environmental knowledge while using a participatory action or community based approach It looks at the problems associated with documenting traditional knowledge problems that are shared by researchers around the world and it explores some of the means by which traditional knowledge can be integrated with Western science to improve methods of natural resource management Includes the Dene of the Mackenzie Valley Northwest Territories and the Inuit of Sanikiluaq Belcher Islands   Human Ecology Daniel G. Bates,Judith Tucker,2010-03-29 This book arose from the need to develop accessible research based case study material which addresses contemporary issues and problems in the rapidly evolving field of human ecology Academic political and indeed public interest in the environmental sciences is on the rise This is no doubt spurred by media coverage of climate change and global warming and attendant natural disasters such as unusual drought and flood conditions toxic dust storms pollution of air and water and the like But there is also a growing intellectual awareness of the social causes of anthropogenic environmental impacts political vectors in determining conser tion outcomes and the role of local representations of ecological knowledge in resource management and sustainable yield production This is reflected in the rapid increase of ecology courses being taught at leading universities in the fa growing developing countries much as was the case a decade or two ago in Europe and North America The research presented here is all taken from recent issues of Human Ecology An Interdisciplinary Journal Since the journal itself is a leading forum for cont porary research the articles we have selected represent a cross section of work which brings the perspectives of human ecology to bear on current problems being faced around the world The chapters are organized in such a way to facilitate the use of this volume either to teach a course or to introduce an informed reader to the field   Research Handbook on the International Law of Indigenous Rights Newman, Dwight,2022-04-19 This ground breaking Research Handbook provides a state of the art discussion of the international law of Indigenous rights and how it has developed in recent decades Drawing from their extensive knowledge of the topic leading scholars provide strong general coverage and highlight the challenges and cutting edge issues arising in international Indigenous rights law   *Beaufort Sea Oil and Gas Development Northstar Project* ,1999   *Beyond Intellectual Property* Darrell Addison Posey,Graham Dutfield,1996 Cultural property aboriginal people ethnobiology legal status laws   **Working for Wildlife** Janet Foster,1998-01-01 Foster shows how a small band of dedicated civil servants transformed their own goals of preserving endangered animals into active government policy The definitive history of the beginnings of wildlife conservation in Canada   *The Law of Non-navigational Uses of International Watercourses* Nahid Islam,2010-01-01 Pr sentation de l diteur Despite Asia s large share of global water resources and the importance of its water for sustaining one of the largest agrarian populations in the world Asia s trans boundary water resource management regimes are poorly developed There are only two working international regimes in South and South east Asia the Mekong

and the Indus regimes The remaining international watercourses in Asia are used by riparian countries in a self interested manner without much consideration for the interests of other states or for the environment These national interests do not often represent the interests and needs of the local people This book is divided into three Parts Part I discusses the different contexts of law making in the industrialized west and in agrarian societies in Asia as well as the changing context of law making following the emergence of the concept of sustainable development Part II discusses the regime of international watercourses Part III of the book presents two case studies in Asia the Mekong and the Ganges The main argument is that in the absence of public participation in decision making and resource management the basin states revert to using the watercourses according to the principles of the classical regime The result so far has been unsustainable development environmental degradation and growing poverty of local user communities   Disrobing the Aboriginal Industry Frances Widdowson,Albert Howard,2008-10-24 By examining the root causes of aboriginal problems Frances Widdowson and Albert Howard expose the industry that has grown up around land claim settlements showing that aboriginal policy development over the past thirty years has been manipulated by non aboriginal lawyers and consultants They analyse all the major aboriginal policies examine issues that have received little critical attention child care health care education traditional knowledge and propose the comprehensive government provision of health education and housing rather than deficient delivery through Native self government   **Designing Therapeutic Environments** Bruno Marques,Jacqueline McIntosh,2025-04-17 This book draws on the relationship between culture and the environment and its connection with health and well being Therapeutic environments are settings that comprise the physical ecological psychological spiritual and social environments associated with treatment and healing Throughout the chapters the understanding of therapeutic environments is broadened through the exploration of specific Indigenous cultural and social dimensions Case studies comprise a combination of research papers regarding the theoretical and conceptual underpinnings of therapeutic environments and their application following traditional methods This book contributes to the expanding body of knowledge focusing on the role of therapeutic environments and their role in shaping health and well being through the development of new research methods This book is essential for practitioners scholars and students in architecture landscape architecture interior architecture urban design planning geography building science public health and environmental engineering
