Measure Valued Processes Stochastic Partial Differential Equations And Interacting Systems Crm Proceedings Lecture Notes Vol 5:

Measure-valued Processes, Stochastic Partial Differential Equations, and Interacting Systems Donald Andrew Dawson, 1994-01-01 The papers in this collection explore the connections between the rapidly developing fields of measure valued processes stochastic partial differential equations and interacting particle systems each of which has undergone profound development in recent years Bringing together ideas and tools arising from these different sources the papers include contributions to major directions of research in these fields explore the interface between them and describe newly developing research problems and methodologies Several papers are devoted to different aspects of measure valued branching processes also called superprocesses Some new classes of these processes are described including branching in catalytic media branching with change of mass and multilevel branching Sample path and spatial clumping properties of superprocesses are also studied The papers on Fleming Viot processes arising in population genetics include discussions of the role of genealogical structures and the application of the Dirichlet form methodology Several papers are devoted to particle systems studied in statistical physics and to stochastic partial differential equations which arise as hydrodynamic limits of such systems With overview articles on some of the important new developments in these areas this book would be an ideal source for an advanced graduate course on superprocesses

Stochastic Models Donald Andrew Dawson, Luis G. Gorostiza, B. Gail Ivanoff, 2000 This book presents the refereed proceedings of the International Conference on Stochastic Models held in Ottawa ON Canada in honor of Professor Donald A Dawson Contributions to the volume were written by students and colleagues of Professor Dawson many of whom are eminent researchers in their own right A main theme of the book is the development and study of the Dawson Watanabe superprocess a fundamental building block in modelling interaction particle systems undergoing reproduction and movement The volume also contains an excellent review article by Professor Dawson and a complete list of his work This comprehensive work offers a wide assortment of articles on Markov processes branching processes mathematical finance filtering queueing networks time series and statistics It should be of interest to a broad mathematical audience

Stochastic Ordinary and Stochastic Partial Differential Equations Peter Kotelenetz, 2007-12-05 Stochastic Partial Differential Equations analyzes mathematical models of time dependent physical phenomena on microscopic macroscopic and mesoscopic levels It provides a rigorous derivation of each level from the preceding one and examines the resulting mesoscopic equations in detail Coverage first describes the transition from the microscopic equations to the mesoscopic equations It then covers a general system for the positions of the large particles

Proceedings of the International Congress of Mathematicians S.D. Chatterji, 2012-12-06 Since the first ICM was held in Zurich in 1897 it has become the pinnacle of mathematical gatherings It aims at giving an overview of the current state of different branches of mathematics and its applications as well as an insight into the treatment of special problems of

exceptional importance The proceedings of the ICMs have provided a rich chronology of mathematical development in all its branches and a unique documentation of contemporary research They form an indispensable part of every mathematical library The Proceedings of the International Congress of Mathematicians 1994 held in Zürich from August 3rd to 11th 1994 are published in two volumes Volume I contains an account of the organization of the Congress the list of ordinary members the reports on the work of the Fields Medalists and the Nevanlinna Prize Winner the plenary one hour addresses and the invited addresses presented at Section Meetings 1-6 Volume II contains the invited address for Section Meetings 7-19 A complete author index is included in both volumes the content of these impressive two volumes sheds a certain light on the present state of mathematical sciences and anybody doing research in mathematics should look carefully at these Proceedings For young people beginning research this is even more important so these are a must for any serious mathematics library The graphical presentation is as always with Birkhäuser excellent Revue Roumaine de Mathématiques pures et Appliquées

Journal of Fourier Analysis and Applications Special Issue John J. Benedetto, 2020-03-10 The Journal of Fourier Analysis and Applications is a journal of the mathematical sciences devoted to Fourier analysis and its applications The subject of Fourier analysis has had a major impact on the development of mathematics on the understanding of many engineering and scientific phenomena and on the solution of some of the most important problems in mathematics and the sciences At the end of June 1993 a large Conference in Harmonic Analysis was held at the University of Paris Sud at Orsay to celebrate the prominent role played by Jean Pierre Kahane and his numerous achievements in this field The large variety of topics discussed in this meeting ranging from classical Harmonic Analysis to Probability Theory reflects the intense mathematical curiosity and the broad mathematical interest of Jean Pierre Kahane Indeed all of them are connected to his work The mornings were devoted to plenary addresses while up to four parallel sessions took place in the afternoons Altogether there were about eighty speakers This wide range of subjects appears in these proceedings which include thirty six articles

Bäcklund and Darboux Transformations A. A. Coley, 2001 This book is devoted to a classical topic that has undergone rapid and fruitful development over the past 25 years namely Backlund and Darboux transformations and their applications in the theory of integrable systems also known as soliton theory The book consists of two parts The first is a series of introductory pedagogical lectures presented by leading experts in the field They are devoted respectively to Backlund transformations of Painlevé equations to the dressing method and Backlund and Darboux transformations and to the classical geometry of Backlund transformations and their applications to soliton theory The second part contains original contributions that represent new developments in the theory and applications of these transformations Both the introductory lectures and the original talks were presented at an International Workshop that took place in Halifax Nova Scotia Canada This volume covers virtually all recent developments in the theory and applications of Backlund and Darboux transformations
