Measurement In Neurological Rehabilitation

Janet H. Carr, Roberta B. Shepherd

Measurement In Neurological Rehabilitation:

Measurement in neurological rehabilitation Derick T. Wade, 1992 The majority of people in the community with moderate to severe disability have neurological diseases This book focuses on the use of standard measures in the management of people with disability arising from neurological conditions and will therefore be of interest to anyone involved with helping such individuals It starts by outlining the World Health Organization model of impairment disability and handicap and then discusses some general principles underlying the use of measures Specific areas such as the assessment of mobility are also discussed Copies of the commonly used measures are included so that readers can decide for themselves which measures are of most use to them and to enable them to interpret the results of other people's work Throughout the book there is an emphasis on the use of measures in practical day to day work The book will be particularly useful for anyone involved in service audit or evaluation and anyone planning future services

Physical Management in Neurological

Rehabilitation Maria Stokes, 2004 Building upon the success of the first edition of this popular book the new edition of *Physical Management in Neurological Rehabilitation* has been completely up dated and revised to reflect changes in practice today The authors consider the theoretical basis and scientific evidence of effective treatment taking a multidisciplinary problem solving approach to patient management which involves patients and carers in goal setting and decision making Book jacket

Handbook of Neurological Rehabilitation Richard J. Greenwood, Thomas M. McMillan, Michael P. Barnes, Christopher D. Ward, 2005-08-16 Provides an invaluable resource for all professions that work with patients suffering from neurological disorders

Neurological Rehabilitation Janet H. Carr, Roberta B. Shepherd, 2010-07-12 The Pageburst™ E Only version of this title gives you access to the complete book content electronically Pageburst™ enhances learning by not only bringing world class content to your fingertips but also letting you add to it annotate it and categorize it all in a way that suits you Pageburst™ frees you to spend more time learning and less time searching Janet Carr and Roberta Shepherd head up a new team of eminent authors for the second edition of this definitive text on neurological physiotherapy In the first edition the authors described a model of neurological rehabilitation for individuals with motor dysfunction based on scientific research in the areas of neuromuscular control biomechanics motor skill learning and the link between cognition and action together with developments in pathology and adaptation The new edition continues to advance this model while identifying and incorporating the many advances that have occurred in the last decade in the understanding and treatment of adults with neurological conditions whether caused by accident or disease Among these advances is the knowledge that the brain retains a plastic potential to reorganize even in old and or lesioned brains and that neural plasticity can be influenced by task related mental and physical practice in a stimulating environment There is also an increasing body of knowledge related to the musculoskeletal system's adaptability and the need to prevent length and stiffness related changes in muscle contractility together with loss of aerobic fitness and endurance There is an expanding body of clinical research that appears to support

the model provided here The training guidelines outlined in Neurological Rehabilitation are based on biomechanical constructs and motor relearning research applied to enhance brain reorganization and muscle contractility and encourage functional recovery of the patient It connects science and clinical practice enabling students and practitioners to develop their knowledge and use new clinical methods based on modern scientific understanding Please note that this version is the Pageburst ebook only and does not include the printed textbook Alternatively you can purchase the printed book with access to Pageburst included this gives you both the printed and the electronic version together All chapters have been revised some with the collaboration of five specialists who are engaged in high level scientific research and clinical practice Biomechanical models are presented to provide a framework for action specific training and exercise to improve performance Clinical guidelines are science and evidence based Emphasis is on new approaches to the delivery of neurological rehabilitation that increase the time spent in mental and physical activity and the intensity of practice and exercise Up to date referencing

Neurological Rehabilitation Andrea L. Behrman, Mark G. Bowden, Dorian K. Rose, 2013-01-10 The clinical trial is essential to testing efficacy and effectiveness of therapeutic interventions Neurorehabilitation presents unique challenges in the execution of clinical trials due to the complexity of both human interface with complex interventions and clinical research staff interaction Attention to key elements recruitment retention treatment fidelity and control intervention selection contributes to successful conduct of a trial Alternatives to the randomized controlled trial and outcome measure selection are important considerations contributing to the merit of the trial While clinical trial outcomes contribute to the scientific evidence their true value and impact comes in the next step translation to clinical practice and the improvement of patient outcomes and quality of life Translation of evidence into practice may best be achieved via partnerships of scientists clinicians and administrators resulting in a dynamic interface between science and practice the laboratory and the clinic

Neurological Rehabilitation Michael P. Barnes, David C. Good, 2013-01-10 Neurological Rehabilitation is the latest volume in the definitive Handbook of Clinical Neurology series It is the first time that this increasingly important subject has been included in the series and this reflects the growing interest and quality of scientific data on topics around neural recovery and the practical applications of new research The volume will appeal to clinicians from both neurological and rehabilitation backgrounds and contains topics of interest to all members of the multidisciplinary clinical team as well as the neuroscience community The volume is divided into five key sections The first is a summary of current research on neural repair recovery and plasticity The authors have kept the topics readable for a non scientific audience and focused on the aspects of basic neuroscience that should be most relevant to clinical practice The next section covers the basic principles of neurorehabilitation including excellent chapters on learning and skill acquisition outcome measurement and functional neuroimaging The key clinical section comes next and includes updates and reviews on the management of the main neurological disabling physical problems such as spasticity pain sexual functioning and dysphagia Cognitive emotional and

behavioural problems are just as important and are covered in the next section with excellent chapters for example on memory and management of executive dysfunction The final part draws the sections on symptom management together by discussing the individual diseases that are most commonly seen in neurorehabilitation and providing an overview of the management of the disability associated with those disorders The volume is a definitive review of current neurorehabilitation practice and will be valuable to a wide range of clinicians and scientists working in this rapidly developing field A volume in the Handbook of Clinical Neurology series which has an unparalleled reputation as the world's most comprehensive source of information in neurology International list of contributors including the leading workers in the field Describes the advances which have occurred in clinical neurology and the neurosciences their impact on the understanding of neurological disorders and on patient care
