M. Beach, 2021-09-30 This book examines the idea of

educational accountability which has become a new secular gospel But do accountability policies actually make schools better Do business management theories and practices make organizations more effective What if the most widely used management theories and assessment tools don't work What if educational accountability tools don't actually measure what

they're supposed to. What if accountability data isn't valid or worse, what if it's meaningless? What if administrators don't know how to use accountability tools or correctly analyze the problematic data these tools produce? What if we can't measure, let alone accurately assess, what matters most with teaching or student learning? How is a business model of economic efficiency supposed to increase the competing and perhaps mutually exclusive ends of schooling, such as human development, student learning, personal satisfaction, social mobility, and economic growth? What if students don't learn much in schools? What if schools were never designed to produce student learning? This book will answer these questions with a wide interdisciplinary range of the latest scientific research.
