Environmental Health Perspectives, 1993 **Congress Proceedings** William C. Dewey, Martha Edington, Michael Fry, 2013-10-02 Congress Proceedings **Mechanisms in Fibre Carcinogenesis** Robert C. Brown, John A. Hoskins, Neil F. Johnson, 2012-12-06 The Editors are sorry that the production of this volume was delayed by the ill health of one of them and we hope that this does not detract from the value of the contents For once this delay is not the fault of any of the authors only the editors are to blame Many of the workers in the field of fibre toxicology became convinced by the middle 1980 s that the worst of the furore over asbestos was over although we were left with an intriguing problem how does asbestos cause disease It was expected that the future impact of fibres on human health would be very small since asbestos exposure would be controlled and there was little chance that man made fibres would prove hazardous These man made fibres are much thicker than asbestos and in most cases they are less durable in the body Both of these properties are believed to make them much less likely to cause disease However many of us had fallen into the habit of calling these materials asbestos substitutes and thus they have acquired a little of the notoriety attached to the natural fibrous minerals Very few of these man made fibres are actually used as replacements for asbestos Asbestos was not suitable for the uses to which the insulation wools are usually put and the ceramic fibres are replacements for fire brick not asbestos which is destroyed at the temperatures at which these materials are used **Modeling of Cancer Genesis and Prevention** Nicolae Voiculescu, Alexandru T Balaban, Ion Niculescu-Duvaz, Zeno Simon, 1991-02-26 This book presents a comprehensive review of the interaction between cancer research and mathematical methods for both investigators in the field and newcomers just entering it The book's primary focus is on the use of computer assisted mathematical modeling in carcinogenesis and cancer prevention The first two chapters include a general presentation of the carcinogenesis and anticarcinogenesis molecular mechanisms followed by a discussion of mathematical models of triggers for gene regulation A description of the prediction of both carcinogenicity and mutagenicity using quantum mechanical topological or physico chemical indices is presented as well as a discussion of the QSAR analysis of carcinogenesis inhibiting compounds known as blocking or suppressive agents *Theories of Carcinogenesis* Olav Hilmar Iversen, 1988-01-01 Proceedings of an international conference held in Oslo Aug 1986 Topics include philosophy of science oncogenes two stage theory aging phenotypic cellular changes and growth control cell proliferation hormonal carcinogenesis clonality Acidic paper Annotation copyright Book News Inc Portland Or

Transformation of Human Diploid Fibroblasts George E. Milo, Bruce C. Casto, 2024-12-06 This comprehensive publication draws together the important aspects of carcinogen cell interaction This interesting work describes the regulation of normal cell proliferation cellular responses to carcinogen damage the biologic consequences of cellular DNA modification the structural and genomic changes resulting from carcinogen insult and the possible involvement of such changes in the conversion of normal human fibroblasts to malignant cells It presents current reviews with up to date literature references

and provides critical information from leading investigators that is essential in understanding the biology of human cell transformation This volume is especially useful to advanced students in genetic toxicology molecular biologists and all who are interested in the molecular and macromolecular changes in human cells leading to neoplasia
