International Law and Ocean Use Management Lawrence Juda, 2013-02-01 This book places contemporary problems of ocean use management in historical context beginning with the time of Hugo Grotius whose seminal 1609 work *The Freedom of the Seas* was the basis of ocean law for the next three centuries Individual use problems are dealt with in detail and include overfishing migrating fish stocks and fish wars oil drilling deep sea mining and marine pollution Throughout the author notes the need to seek solutions in ocean management from a more integrated perspective Emphasis is placed on the United Nations Conference on the Law of the Sea and the resulting agreements This book therefore presents a unique breadth of view which will make it salient to policy makers diplomats scholars and ocean users The EU Maritime Safety Policy and International Law Henrik Ringbom, 2008-09-30 This book offers a comprehensive international law analysis of the European Union's maritime safety legislation This is a relatively novel field of activity of the EU but its development has been very rapid Since 1993 over 40 acts of EU law have been adopted dealing with a variety of subjects such as port State control classification societies vessel traffic management ship construction environmental protection and pollution sanctions This legislation is analysed from the point of international law notably the law of the sea and the international maritime conventions Regional legislation in a field that is traditionally regulated primarily by means of international conventions is bound to create tensions with the related international conventions and with well established principles of international law This study assesses how the EU has acted as a flag State port State and coastal State and measures the trends in this development against the international legal framework More detailed legal analyses are offered for specific aspects of EU legislation that are considered to be particularly interesting from an international law point of view The relationship between EU law and international law within the internal EU legal system is also analysed from the specific perspective of maritime safety law *Effects of Insurance on Maritime Liability Law* Muhammad Masum Billah, 2014-01-07 The book examines how the absence of insurance in the past led to some special maritime liability law principles such as general average i.e. losses or expenses shared by all the parties to a maritime adventure and the limitation of shipowners liability In the absence of insurance these principles served the function of insurance mostly for shipowners As commercial marine insurance is now widely available these principles have lost their justification and may in fact interfere with the most important goal of liability

law i.e. deterrence from negligence. The work thus recommends their abolition. It further argues that when insurance is easily available and affordable to the both parties to a liability claim the main goal of liability law should be deterrence as opposed to compensation. This is exactly the case with the maritime cargo liability claims where both cargo owners and shipowners are invariably insured. As a result the sole focus of cargo liability law should be and to a great extent is deterrence. On the other hand in the vessel source oil pollution liability setting pollution victims are not usually insured. Therefore oil pollution liability law has to cater both for compensation and deterrence the two traditional goals of liability law. The final question the work addresses is whether the deterrent effect of liability law is affected by the availability of liability insurance. Contrary to the popular belief the work attempts to prove that the presence of liability insurance is not necessarily a hindrance but can be a complementary force towards the realization of deterrent goal of liability law.

The Greening of Machiavelli Tony Brenton, 2019-03-21. First published in 1994. Environmental issues present a daunting challenge to the international system. The destruction of the tropical rainforest, the Chernobyl explosion and the ozone layer hole all underline the transnational nature of environmental threats and the need for states to act together in order to tackle them. How have such environmental issues entered political agendas in different parts of the world and how has that affected national positions? Can governments ever reconcile their own national interests with the international cooperation needed to deal with transboundary issues such as climate change? This book traces the history of international environmental negotiations and regulations and looks at the domestic policies upon which cooperation in the international community depends. It covers some major milestones in recent history from the Torrey Canyon accident through to the Rio Earth Summit and the emergence of the European Community as a major international environmental actor. It also looks at cross cutting issues such as the role of non governmental organizations, the environmental impacts of world agriculture and trading arrangements, industry's attitudes and the relationship between democracy and environmental protection. It concludes by examining how the international system has adapted and may adapt further to deal effectively with environmental problems and reflects on the implications of this for the future.

The Oxford Handbook of International Environmental Law Lavanya Rajamani, Jacqueline Peel, 2021-08-06. The second edition of this leading reference work provides a comprehensive discussion of the dynamic and important field of international law concerned with environmental protection. It is edited by globally recognised international environmental law scholars Professor Lavanya Rajamani and Professor Jacqueline Peel and features 67 chapters authored by 76 renowned experts in their fields. The Handbook discusses the key principles underpinning international environmental law, its relevant actors and tools and rules applying in its substantive sub fields such as climate law, oceans law, wildlife and biodiversity law and hazardous substances regulation. It also explores the intersection of international environmental law with other areas of international law such as those concerned with trade, investment, disaster, migration, armed conflict, intellectual property, energy and human rights. The Handbook sets its discussion of international environmental law in the broader

interdisciplinary context of developments in science ethics politics and economics which inform the way in which environmental rules are made implemented and enforced It provides an introduction to the foundations of international environmental law while also engaging with questions at the frontiers of research teaching and practice in the field including the role of Global South perspectives the contribution made by Earth jurisprudence and the growing role of a diverse range of actors from indigenous peoples to business and industry Like the first edition this second edition of the Handbook is an essential reference text for all engaged with environmental issues at the international level and the applicable governance and regulatory structures
