Pollution And Physiology Of Marine Organisms:

Pollution and Physiology of Marine Organisms F. John Vernberg, Winona B. Vernberg, 2013-09-24 *Pollution and Physiology of Marine Organisms* is a compendium of papers presented at the symposium on the effects of pollution on the physiological ecology of estuarine and coastal water organisms held at the University of South Carolina. The collection discusses the effects of a wide variety of toxicants emitted by settlers and factories in the great majority of coastal and estuarine areas on marine organisms. The studies are divided into five sections: heavy metals, pesticides and PCBs, oil and dispersants, synergistic effects of pollutants, and various environmental parameters. Marine biologists, ecologists, environmentalists, biologists, zoologists, and researchers will find the book a good source of insight into the topic. *Pollution and Physiology of Marine Organisms* FJ VERNBERG (Ed), 1974. Abstracts Middle Atlantic Coastal Fisheries Center (U.S.), Belle W. It explores the effects of pollutants such as petroleum hydrocarbons, heavy metals, pesticides, and polychlorinated biphenyls (PCBs) on marine organisms ranging from pink salmon fry to sculpins, estuarine fishes, and crabs, bivalve mollusks, lugworms, and oysters. Comprised of four parts encompassing 22 chapters, this volume begins with an overview of the fate and effects of petroleum hydrocarbons on marine biota. It proceeds with a discussion of the hydrocarbon metabolic system in polychaetes and their role in the degradation of hydrocarbons in sediments; the effects of aromatic hydrocarbon toxicants on breathing rates of pink salmon fry; and biological and toxicological effects of heavy metals and other cations on marine species. The book also describes the impact of PCBs and pesticides on the estuarine environment and how more specialized and less persistent chemicals affect the development and reproduction of nontarget organisms such as Crustacea. This book will be a valuable resource for marine scientists, ecologists, and students. Pollution Physiology of Estuarine Organisms Winona B. Vernberg, 2012-12-02 *Physiological Responses of Marine Biota to Pollutants* contains the proceedings of a symposium entitled *Pollution and Physiology of Marine Organisms* held in Connecticut in November 1975. It explores the influence of pesticides, polychlorinated biphenyls (PCBs), petroleum products, and heavy metals on the physiology of marine species such as fish, crabs, shrimps, lobsters, and mussels. More specifically, it looks at the functional mechanisms underlying the response of marine organisms to pollutants that act either alone or in combination with other pollutants and/or normal environmental factors. Comprised of five parts encompassing 27 chapters, this volume begins with an overview of pesticides and PCBs and their effects on marine organisms, including those of malathion on the
