

Composites – Polymer Matrix

Polymer matrix composites (PMC) and fiber reinforced plastics (FRP) are referred to as **Reinforced Plastics**. Common fibers used are glass (GFRP), graphite (CFRP), boron, and aramids (Kevlar). These fibers have **high specific strength** (strength-to-weight ratio) and **specific stiffness** (stiffness-to-weight ratio)

Matrix materials are usually thermoplastics or thermosets; polyester, epoxy (80% of reinforced plastics), fluorocarbon, silicon, phenolic.

Polymer Matrix Composites R.E. Shalin, 2012-12-06 Some years ago in Paisley Scotland the International Conference on Composite Materials headed by Professor I Marshall took place During the conference I presented a paper on the manufacturing and properties of the Soviet Union's composite materials Soviet industry had made great achievements in the manufacturing of composite materials for aerospace and rocket applications For example the fraction of composites predominantly carbon fibre reinforced plastics in the large passenger aircrafts Tu 204 and 11 86 is 12 15% of the structure weight The percentage by weight share of composites in military aircraft is greater and the fraction of composites organic fibre reinforced plastics used in military helicopters exceeds a half of the total structure weight The nose parts of most rockets are produced in carbon carbon materials In the Soviet spacecraft Buran many fuselage tubes are made of boron aluminium composites Carbon aluminium is used for space mirrors and gas turbine blades These are just a few examples of applications Many participants at the Paisley conference suggested that the substantial Soviet experience in the field of composite materials should be distilled and presented in the form of a comprehensive reference publication So the idea of the preparation and publication of a six volume work Soviet Advanced Composites Technology edited by Academician J
