**Polymeric Drug Delivery** Sönke Svenson, 2006 Polymeric Drug Delivery Polymeric Matrices and Drug Particle engineering is designed to bridge the gap between industrial and academic researchers in drug delivery and the pharmaceutical industry because conferences focus one of these two aspects The book covers three main topics of drug delivery the use of particulate carriers to transport actives to specific sites within the body the use of matrices to tailor release rates to drug specific needs and technologies to engineer drug particles in a way that will improve their bioavailability Polymeric materials are being used in all three areas as carriers matrices or part of the formulation of drug particles Encapsulation and Controlled Release Technologies in Food Systems Dr Jamileh M. Lakkis, 2016-02-11 The emergence of the discipline of encapsulation and controlled release has had a great impact on the food and dietary supplements sectors principally around fortifying food systems with nutrients and health promoting ingredients The successful incorporation of these actives in food formulations depends on preserving their stability and bioavailability as well as masking undesirable flavors throughout processing shelf life and consumption This second edition of Encapsulation and Controlled Release Technologies in Food Systems serves as an improvement and a complement companion to the first However it differentiates itself in two main aspects Firstly it introduces the reader to novel encapsulation and controlled release technologies which have not yet been addressed by any existing book on this matter and secondly it offers an in depth discussion on the impact of encapsulation and controlled release technologies on the bioavailability of health ingredients and other actives In common with the first edition the book includes chapters written by distinguished authors and researchers in their respective areas of specialization This book is designed as a reference for scientists and formulators in the food nutraceuticals and consumer products industries who are looking to formulate new or existing products using microencapsulated ingredients It is also a post graduate text designed to provide students with an introduction to encapsulation and controlled release along with detailed coverage of various encapsulation technologies and their adaptability to specific applications *Handbook of Materials for Nanomedicine* Vladimir Torchilin, Mansoor M. Amiji, 2011-11 The fast developing field of nanomedicine uses a broad variety of materials to serve as delivery systems for drugs genes and diagnostic agents This book is the first attempt to put under one cover all major available information about these materials both still on experimental levels and already applied in patients **Handbook of Cosmetic Science and Technology** André O. Barel, Marc Paye, Howard I. Maibach, 2009-03-03 Edited by a team of experienced and internationally renowned contributors the updated Third Edition is the standard reference for cosmetic chemists and dermatologists seeking the latest innovations and technology for the formulation design testing use and production of cosmetic products for skin hair and nails New features in the Third Edition **Polymeric Micelle Nanocarriers for the Treatment of Disseminated Candidiasis** Ronak Vakil, 2006 **Biopolymers In Drug Delivery: Recent Advances and Challenges** Michael U.

Adikwu, Charles O. Esimone, 2009-01-15 This Ebook describes the applicability of diverse natural and synthetic biopolymers and their blends in drugs vaccines and gene delivery It would serve as a concise body of information on biopolymers for researchers industries and students of pharmaceu

*Intracellular Delivery* Aleš Prokop, 2011-05-26 This book features a special subsection of Nanomedicine an application of nanotechnology to achieve breakthroughs in healthcare It exploits the improved and often novel physical chemical and biological properties of materials only existent at the nanometer scale As a consequence of small scale nanosystems in most cases are efficiently uptaken by cells and appear to act at the intracellular level Nanotechnology has the potential to improve diagnosis treatment and follow up of diseases and includes targeted drug delivery and regenerative medicine it creates new tools and methods that impact significantly upon existing conservative practices This volume is a collection of authoritative reviews In the introductory section we define the field intracellular delivery Then the fundamental routes of nanodelivery devices cellular uptake types of delivery devices particularly in terms of localized cellular delivery both for small drug molecules macromolecular drugs and genes at the academic and applied levels are covered The following section is dedicated to enhancing delivery via special targeting motifs followed by the introduction of different types of intracellular nanodelivery devices e g a brief description of their chemistry and ways of producing these different devices Finally we put special emphasis on particular disease states and on other biomedical applications whilst diagnostic and sensing issues are also included Intracellular delivery therapy is a highly topical which will stir great interest Intracellular delivery enables much more efficient drug delivery since the impact on different organelles and sites is intracellular as the drug is not supplied externally within the blood stream There is great potential for targeted delivery with improved localized delivery and efficacy

**Inhalation Aerosols** Anthony J. Hickey, Heidi M. Mansour, 2019-03-21 Inhalation aerosols continue to be the basis for successful lung therapy for several diseases with therapeutic strategies and the range of technology significantly evolving in recent years In response this third edition takes a new approach to reflect the close integration of technology with its application After briefly presenting the general considerations that apply to aerosol inhalation the central section of the book uses the focus on disease and therapeutic agents to illustrate the application of specific technologies The final integrated strategies section draws the major points from the applications for disease targets and drug products
