theoretical approaches The second chapter is devoted to biopolymers the first polymers known to produce molecular compounds chiefly with water The third chapter deals with synthetic polymers where compound formation is either due to hydrogen bonding or to electrostatic interactions The fourth chapter describes intercalates and clathrates systems for which compound formation is mainly due to a molecular recognition process First book on the subject Gives a short but exhaustive description of investigational tools Covers both biopolymers and synthetic polymers Uses temperature concentration phase diagrams abundantly for describing the systems Describes systems from the nano to the microscopic level including mechanical properties Polymer-solvent Complexes and Intercalates Jean-Michel Guenet,A.
