Regional Petroleum Geology Of The Black Sea:

Regional and Petroleum Geology of the Black Sea and Surrounding Region Andrew G. Robinson, 1997

Petroleum Geology of the Black Sea M.D. Simmons, G.C. Tari, A.I. Okay, 2018-08-14 The Black Sea remains one of the largest underexplored rift basins in the world. Future success is dependent on a better understanding of a number of geological uncertainties. These include reservoir and source rock presence and quality and the timing of migration of hydrocarbons relative to trap formation. An appreciation of the geological history of the Black Sea basins and the surrounding orogens is therefore key. The timing of basin formation, uplift of the margins and of facies distribution remain issues for robust debate. This Special Publication presents the results of 15 studies that relate to the tectono-stratigraphy and petroleum geology of the Black Sea. The methodologies of these studies encompass crustal structure, geodynamic evolution, stratigraphy and its regional correlation, petroleum systems, source to sink, hydrocarbon habitat and play concepts and reviews of past exploration. They provide insight into the many ongoing controversies concerning Black Sea regional geology and provide a better understanding of the geological risks that must be considered for future hydrocarbon exploration.

Tectonic Development of the Eastern Mediterranean Region A. H. F. Robertson, Demosthenis Mountrakis, 2006 The Eastern Mediterranean region is a classic area for the study of tectonic processes and settings related to the development of the Tethyan orogenic belt. The present set of research and synthesis papers by earth scientists from countries in this region and others provides an up to date interdisciplinary overview of the tectonic development of the Eastern Mediterranean region from Precambrian to Recent. Key topics include continental rifting, ophiolite genesis and emplacement, continental collision, extensional tectonics, crustal exhumation and intra-plate deformation e.g. active faulting. Alternative tectonic reconstructions of the Tethyan orogen are presented and discussed with important implications for other regions of the world. The book will be an essential source of information and interpretation for academic researchers, geologists and geophysicists, advanced undergraduates and also for industry professionals including those concerned with hydrocarbons, minerals and geological hazards e.g. earthquakes. *Tectonics and Magmatism in Turkey and the Surrounding Area* Erdin Bozkurt, J. D. A. Piper, J. A. Winchester, 2000. Containing 23 papers from a range of international contributors, this volume describes recent research into the tectonics and magmatism of Turkey and its surroundings. This region is sited at the collision zone between Eurasia and Afro Arabia and as such provides an extraordinarily complete and well exposed record of the staged tectonic evolution of this sector of the Alpine-Himalayan orogen.

Geological Development of Anatolia and the Easternmost Mediterranean Region A. H. F. Robertson, Osman Parlak, Ulvi Can Ünlügenç, 2013 Anatolia and the easternmost Mediterranean region, especially Turkey, Cyprus and northern Syria, represent an excellent natural laboratory for the study of fundamental geological processes e.g. rifting, seafloor spreading, ophiolite genesis and emplacement, subduction, exhumation and collision. Their interaction has created an intriguing array of deep sea basins, microcontinents and suture zones. The

volume s 22 papers include a large amount of new field based information much of it multidisciplinary and the product of teamwork After an overview the volume is divided into four sections Late Palaeozoic Early Cenozoic of the Pontides northern Turkey Late Palaeozoic Early Cenozoic of the Taurides Anatolides central and southern Turkey Late Cretaceous Pliocene sedimentary basins and structural development central Anatolia to the Mediterranean Late Miocene Recent Neotectonics southern Turkey Cyprus and northern Syria The volume will interest numerous academic researchers those concerned with resources e g hydrocarbons mineral deposits and also hazards e g earthquakes as well as advanced undergraduate and postgraduate students P 4 of cover

Sedimentary Processes, Environments and Basins Gary Nichols,Edward Williams,Chris Paola,2009-03-05 For several decades Peter Friend has been one of the leading figures in sedimentary geology and throughout that time he has helped scores of other people by supervising doctoral students collaborating with colleagues especially in developing countries and selflessly sharing ideas with fellow geologists This collection of papers is a survey of the research frontier in basin dynamics a field Peter Friend helped initiate and a token of thanks from people who have benefited from an association with Peter during their careers The papers in this book fall into four themes Tectonics and sedimentation Landscape evolution and provenance Depositional systems and Fluvial sedimentation which reflect Peter s research interests and are all important areas of current research in sedimentary geology There are both case studies and review articles on these themes which reflect recent work but the collection can also be considered to be a sampler of sedimentary geology for anyone with broad interests in the Earth sciences

Paleozoic and Mesozoic tectonic evolution of central and eastern Asia Gregory Arlen Davis,Marc S,2001 Hendrix geology U of Montana and Davis earth sciences U of Southern California present 19 articles detailing ground based work on the history of assembly and intracontinental deformation of central and eastern Asia Chapters look at the structural thermochronologic and sedimentary records of the history of Paleozoic assembly in Mongolia and central and western China Further information is presented on Mesozoic deformation in orogenic belts of central and eastern Asia Asia s sedimentary basins are examined and the intracontinental deformation they record is documented Many of these contributions particularly the papers examining Mongolian geology are the first ground based articles written in English Annotation c Book News Inc Portland OR booknews com

The Mediterranean Basins Bernard Durand,1999 The coexistence in space and time of growing mountain belts and actively extending basins poses a number of yet unsolved questions in terms of mechanics This problem is particularly crucial in the Mediterranean regions where all Cenozoic basins opened in the internal zones of mountain belts This volume brings together contributions from geologists and geophysicists in the quest to solve the complex dynamic problem posed by the Mediterranean region It presents a wealth of new data on various topics centred on the Mediterranean region from the deep

mantle structure to the detailed geometry of sedimentary basins BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

Thick-Skin-Dominated Orogens M. Nemčok,A. Mora,J.W. Cosgrove ,2013-10-24 This volume studies the driving dynamic for thick skin tectonics It evaluates the role of various factors that control the development of thick skin architecture The studied driving dynamics include individual plate movement rates overall convergence rates orogen movement sense with respect to mantle flow and pro wedge versus retro wedge location Numerous internal factors that influence the architecture of thick skinned dominated orogens have been considered These include the role of the rheology of the deforming layers the presence or absence of potential detachment horizons basement buttresses crustal thickness variations inherited strength contrasts and the impact of pre existing anisotropy in thick skin orogenic deformation External factors discussed include the role of both syn tectonic erosion and deposition in deformation The study areas begin with worldwide examples and close with a detailed coverage of the Northern Andes natural laboratory which is characterized by particularly robust data coverage

Imaging, Mapping and Modelling Continental Lithosphere Extension and Breakup Garry D. Karner,Gianreto Manatschal,L. Pinheiro,2007 This volume summarises our present understanding of the formation of passive continental margins and their ocean continent transitions It outlines the geological geophysical and petrological observations that characterize extensional systems and how such observations can guide and constrain dynamic and kinematic models of continental lithosphere extension breakup and the inception of organized sea floor spreading

Lacustrine Sandstone Reservoirs and Hydrocarbon Systems Olive W. Baganz,Yuval Bartov,Kevin M. Bohacs,Dag Nummedal,2012-11-20 Many publications on lacustrine systems concentrate on reconstructing paleo environments deciphering paleoclimate or estimating hydrocarbon source potential This is the first memoir to give attention to describing the occurrence distribution and character of sandstones in various lake settings The memoir is divided into four sections beginning with a global overview and followed by two sections covering lacustrine systems in compressional and extensional regimes and concludes with a series of papers on modern lake regimes
