Regulating Toxic Substances A Philosophy Of Science And The Law:

Regulating Toxic Substances Carl F. Cranor, 1993-02-18 The proliferation of chemical substances in commerce poses scientific and philosophical problems The scientific challenge is to develop data methodologies and techniques for identifying and assessing toxic substances before they cause harm to human beings and the environment The philosophical problem is how much scientific information we should demand for this task consistent with other social goals we might have In this book Cranor utilizes material from ethics philosophy of law epidemiology tort law regulatory law and risk assessment to argue that the scientific evidential standards used in tort law and administrative law to control toxics ought to be evaluated with the purposes of the law in mind Demanding too much for this purpose will slow the evaluation and lead to an excess of toxic substances left unidentified and unassessed thus leaving the public at risk Demanding too little may impose other costs An appropriate balance between these social concerns must be found Justice requires we use evidentiary standards more appropriate to the legal institutions in question and resist the temptation to demand the most intensive scientific evaluation of each substance subject to legal action

Philosophy and the Precautionary Principle Daniel Steel, 2015 This book presents and defends an interpretation of the precautionary principle from the perspective of philosophy of science *The Ethics of Protocells* Mark Bedau, Emily C. Parke, 2009 Teams of scientists around the world are racing to create protocells microscopic self organizing entities that spontaneously assemble from simple organic and inorganic materials The creation of fully autonomous protocells a technology that can for all intents and purposes be considered literally alive is only a matter of time This book examines the pressing social and ethical issues raised by the creation of life in the laboratory Protocells might offer great medical and social benefits and vast new economic opportunities but they also pose potential risks and threaten cultural and moral norms against tampering with nature and playing God The Ethics of Protocells offers a variety of perspectives on these concerns

philosophy and professional philosophers new to philosophy of psychiatry **The Law of Environmental Justice** Michael Gerrard, Sheila R. Foster, 2008 Environmental justice is the concept that minority and low income individuals communities and populations should not be disproportionately exposed to environmental hazards and that they should share fully in making the decisions that affect their environment This volume examines the sources of environmental justice law and how evolving regulations and court decisions impact projects around the country *Exploring Inductive Risk* Kevin C. Elliott, Ted Richards, 2017-06-01 Science is the most reliable means available for understanding the world around us and our place in it But since science draws conclusions based on limited empirical evidence there is always a chance that a scientific inference will be incorrect That chance known as inductive risk is endemic to science Though inductive risk has always been present in scientific practice the role of values in responding to it has only recently gained extensive attention from philosophers scientists and policy makers *Exploring Inductive Risk* brings together a set of eleven concrete case studies with the goals of illustrating the pervasiveness of inductive risk assisting scientists and policymakers in responding to it and moving theoretical discussions of this phenomenon forward The case studies range over a wide variety of scientific contexts including the drug approval process high energy particle physics dual use research climate science research on gender disparities in employment clinical trials and toxicology The book includes an introductory chapter that provides a conceptual introduction to the topic and a historical overview of the argument that values have an important role to play in responding to inductive risk as well as a concluding chapter that synthesizes important themes from the book and maps out issues in need of further consideration Trade in Food Alberto Alemanno, 2007 Trade in Food surveys and explores the evolution of the European Community's regulation of food within the broader framework set out by the WTO Agreements Its main purpose is to provide readers keen to deepen their knowledge of the field with easy access to the EC and WTO food laws accompanied by a critical explanation and commentary The book is suitable for legal practitioners judges policy makers officials of international organizations as well as post graduate students of international trade law and policy international and European economic law global administrative law and risk regulation Risk Regulation and Administrative Constitutionalism Elizabeth Fisher, 2007-07-30 Over the last decade the regulatory evaluation of environmental and public health risks has been one of the most legally controversial areas of contemporary government activity Much of that debate has been understood as a conflict between those promoting scientific approaches to risk evaluation and those promoting democratic approaches This characterization of disputes has ignored the central roles of public administration and law in technological risk evaluation This is problematic because as shown in this book legal disputes over risk evaluation are disputes over administrative constitutionalism in that they are disputes over what role law should play in constituting and limiting the power of administrative risk regulators This is shown by five case studies taken from five different legal cultures an analysis of the bifurcated role of the Southwood Working Party in the UK BSE crisis the development of doctrines in

Asante-Duah, I.V. Nagy, 1998-03-12 This book discusses the need for a regulated and informed forum for international trade in hazardous waste The authors argue that with careful planning health and ecological risks can be minimized and net economic benefits realized fairly The book examines the key parameters that should be considered by potential trading nations to ensure an optimally safe and mutually beneficial partnership The authors provide comprehensive coverage of the political environmental industrial and economic issues involved in this complex and increasingly controversial practice **Food and Agricultural Biotechnology in Ethical Perspective** Paul B. Thompson, 2020-11-09 This 3rd edition of Food and Agricultural Biotechnology in Ethical Perspective updates Thompson's analysis to reflect the next generation of biotechnology including synthetic biology gene editing and gene drives The first two editions of this book published as Food Biotechnology in Ethical Perspective in 1997 and 2007 were the first comprehensive philosophical studies of genetic engineering applied to food systems The book is structured with chapter length treatments of risk in four categories food safety to animals to the environment and socio economic risks These chapters are preceded by two chapters providing orientation to the uses of gene technology in food and agriculture and to the goals methods and background assumptions of technological ethics There is also a chapter covering all four types of risk as applied to the first US technology recombinant bovine somatotropin The last four chapters take up 1 intellectual property debates 2 religious

metaphysical and intrinsic objections to biotechnology 3 issues in risk and trust and 4 a review of ethical issues in synthetic biology gene editing and gene drives the three key technologies that have emerged since the book was last revised

Implementing the Precautionary Principle Elizabeth Charlotte Fisher, Judith S. Jones, René von Schomberg, 2006-01-01 This challenging book takes a broad and thought provoking look at the precautionary principle and its implementation or potential implementation in a number of fields In particular the essays within the book explore the challenges faced by public decision making processes when applying the precautionary principle including its role in risk management and risk assessment Frameworks for improved decision making are considered followed by a detailed analysis of prospective applications of the precautionary principle in a number of emerging fields including nanotechnology climate change Risk Assessment for Environmental Health Mark G. Robson, William A. Toscano, 2007-03-22 Written by experts in the field this important book provides an introduction to current risk assessment practices and procedures and explores the intrinsic complexities challenges and controversies associated with analysis of environmental health risks Environmental Health Risk Assessment for Public Health offers 27 substantial chapters on risk related topics that include What Is Risk and Why Study Risk Assessment The Risk Assessment Risk Management Paradigm Risk Assessment and Regulatory Decision Making in Environmental Health Toxicological Basis of Risk Assessment The Application of PBPK Modeling to Risk Assessment Probabilistic Models to Characterize Aggregate and Cumulative Risk Molecular Basis of Risk Assessment Comparative Risk Assessment Occupational Risk Radiological Risk Assessment Microbial Risk Assessment Children's Risk Assessment Life Cycle Risk Environmental Laws and Regulations Precautionary Principles Risk Communication **Democratizing Technology** Anne Chapman, 2012-04-27 Democratizing Technology provides a much needed fresh perspective on the regulation of chemicals and an important contribution to green thinking about technology Caroline Lucas Green Party MEP This book is an excellent critique of the current risk based approach to technology By exploring the philosophical underpinnings and the practical applications of current policy on science and technology Chapman exposes the serious flaws in allowing economic considerations to dominate the agenda in this area Her proposals for reform are expertly constructed and deserve urgent and serious consideration by policy makers Dr Stuart Parkinson Executive Director Scientists for Global Responsibility In this important book Anne Chapman argues that decisions about technology should answer a republican question what kind of public world should we create through technology Democratizing Technology deserves to be read widely John O'Neill Professor of Political Economy University of Manchester UK A welcome addition to the new more empirical and applied literature in philosophy of technology This book will be essential reading for a variety of scholars and for the general reader intent on understanding and criticizing our chemically made world Andrew Light Interim Director Program on the Environment University of Washington US What is technology How do humans use it to build and modify the world What are the relationships between technology science economics and democratic governance What if any are our

ethical and political responsibilities and choices in how we develop, deploy and control technology in democratic states. Democratizing Technology sets out to answer these questions. Focusing on the most widespread and pervasive technology chemicals, this groundbreaking volume peels apart the critical technology debate to look at the relationship between humans, technology and the biological world. Attention is given to the immensely important new regulations REACH (Registration, Evaluation, Authorization and restriction of Chemicals), the EU's largest ever legal framework, discussing the problems that are likely to occur in REACH's reliance on risk assessment methods and suggesting an alternative way forward for the regulation of chemicals. Providing much needed clarity and insight into the heart of key debates in science and technology risk analysis and mitigation and domestic and international law, this volume arrives as a breath of fresh air. **Perspectives on**

Causation Richard Goldberg, 2011-10-21. The chapters in this volume arise from a conference held at the University of Aberdeen concerning the law of causation in the UK, Commonwealth countries, France and the USA. The distinguished group of international experts who have contributed to this book examine the ways in which legal doctrine in causation is developing and how British law should seek to influence and be influenced by developments in other countries. As such, the book will serve as a focal point for the study of this important area of law. The book is organised around three themes: the black letter law, scientific evidence and legal theory. In black letter law scholarship, major arguments have emerged about how legal doctrine will develop in cases involving indeterminate defendants and evidential gaps in causation. Various chapters examine the ways in which legal doctrine should develop over the next few years, in particular in England, Scotland, Canada and the USA, including the problem of causation in asbestos cases. In the area of scientific evidence, its role in the assessment of causation in civil litigation has never been greater. The extent to which such evidence can be admitted and used in causation disputes is controversial. This section of the book is therefore devoted to exploring the role of statistical evidence in resolving causation problems, including recent trends in litigation in the UK, USA, Australia and in France, and the question of liability for future harm. In the legal theory area, the so-called NESS (necessary element in a sufficient set) test of causation is discussed and defended. The importance of tort law responding to developing science and observations from the perspective of precaution and indeterminate causation are also explored. The book will be of interest to legal academics, policy makers in the field, specialist legal practitioners, those in the pharmaceutical and bioscience sectors, physicians and scientists. Global
