Second Tier Cities Rapid Growth Beyond The Metropolis:

Second Tier Cities ,1999 **Second Rank Cities in Europe** Roberto Camagni,Roberta Capello,2017-10-02 Second rank cities are back on the academic scene capturing the interest of scholars with their unexpected recent performance with respect to first rank cities Looking at the data on average urban GDP growth in 139 European cities since 1996 the relatively strong position of large cities over 1 5 million inhabitants on national growth coincides with the periods of fastest expansion while at times of slowdown second rank cities prevail Especially in the recent period of economic downturn second rank cities have recorded annual GDP growth rates much less negative than those of capital cities and in some European countries like Austria and Germany all cities have outperformed their capitals In explaining this phenomenon linking urban dynamics to agglomeration theories seems the most interesting approach However merely to link agglomeration economies to urban size in order to interpret urban performance is neither convincing nor sufficient and it calls for additional investigation into how agglomeration economies work This volume claims that interpretation of the current dynamics in European urban systems especially in the western part of Europe would benefit from exploitation of the traditional concept of agglomeration economies However necessary for this purpose are more in depth considerations on the nature scope intensity and causes of agglomeration economies which do not relate their existence solely to urban size And this is where the main challenge for scholars lies in the interpretation of the missing link between agglomeration economies and urban dynamics This book was originally published as a special issue of European Planning Studies **Secondary Cities** Mark Pendras,Charles Williams,2021-06-03 This book explores cities and the intra regional relational dynamics often overlooked by urban scholars and it challenges common representations of urban development successes and failures Gathering leading international scholars from Europe Australia and North America it explores the secondary city concept in urban development theory and practice and advances a research agenda that highlights uneven development concerns By emphasising the subordinate status of secondary cities relative to their dominant neighbours the book raises new questions about regional development in the Global North It considers alternative relations and development strategies that innovatively reimagine the subordinate status of secondary cities and showcase their full potential *The Political Economy of Rural-Urban Conflict* Topher L. McDougal,2017-04-14 In some cases of insurgency the combat frontier is contested and erratic as rebels target cities as their economic prey In other cases it is tidy and stable seemingly representing an equilibrium in which cities are effectively protected from violent non state actors What factors account for these differences in the interface between urban based states and rural based challengers To explore this question this volume examines two regions representing two dramatically different outcomes In West Africa Liberia and Sierra Leone capital cities became economic targets for rebels who posed dire threats to the survival of the state In Maoist India despite an insurgent ideology aiming to overthrow the state via a strategy of progressive city capture the combat frontier effectively firewalls cities from Maoist violence This book argues that trade

networks underpinning the economic relationship between rural and urban areas termed interstitial economies may differ dramatically in their impact on and response to the combat frontier It explains rebel predatory tendencies towards cities as a function of transport networks allowing monopoly profits to be made by urban based traders It explains combat frontier delineation as a function of the social structure of the trade networks hierarchical networks permit elite elite bargains that cohere the frontier These factors represent what might be termed respectively the hardware and software of the rural urban economic relationship Of interest to any student of political economy and violence this book presents new arguments and insights about the relationships between violence and the economy predation and production core and periphery **The**

consciousness in the period 1950-1970, the place of Confucianism in postwar Taiwan and the awakening of the self and the development of a Taiwanese national identity in the post World War II period. Finally, it considers whether mutual historical understanding may be the basis for Taiwan Mainland relations in the twenty-first century. This second edition includes two new chapters on the history of Taiwan after World War II incorporating additional developments in Taiwan in the past decade. Insights extrapolated from an understanding of history are essential for grasping and solving the basic problems Taiwan now faces and above all the conflicted relationship between Taiwan and Mainland China. The book's thematic undercurrent is the question of Taiwan and Mainland China. How do we deal with the tension between cultural China and political China?

Youth, Class and Education in Urban India David Sancho, 2015-12-22 Urban India is undergoing a rapid transformation which also encompasses the educational sector. Since 1991, this important new market in private English medium schools along with an explosion of private coaching centres has transformed the lives of children and their families as the attainment of the best education nurtures the aspirations of a growing number of Indian citizens. Set in urban Kerala, the book discusses changing educational landscapes in the South Indian city of Kochi, a local hub for trade, tourism and cosmopolitan middle class lifestyles. Based on extensive ethnographic fieldwork, the author examines the way education features as a major way the transformation of the city and India in general are experienced and envisaged by upwardly mobile residents. Schooling is shown to play a major role in urban lifestyles with increased privatisation representing a response to the educational strategies of a growing and heterogeneous middle class whose educational choices reflect broader projects of class formation within the context of religious and caste diversity particular to the region. This path-breaking new study of a changing Indian middle class and new relationships with educational institutions contributes to the growing body of work on the experiences and meanings of schooling for youths, their parents and the wider community and thereby adds a unique anthropologically informed perspective to South Asian studies, urban studies and the study of education.

Regional Development in the Knowledge Economy Philip Cooke, Andrea Piccaluga, 2006-09-27 International contributors provide the first examination of the growing subject of regional knowledge economy development. Illustrated by data and stylized accounts, the international contributors chart the evolution of knowledge economies, questioning the way in which they work and criticize accepted theories and inform how places can cope in the knowledge economy. Based in concept on Cooke's *Knowledge Economies* (Routledge, 2002), *Regional Development in the Knowledge Economy* is a well-grounded work exploring this increasingly important theme with relevance.
