Still Waters: The Secret World of Lakes Curt Stager, 2018-05-29 A fascinating exploration of lakes around the world from Walden Pond to the Dead

Sea More than a century and a half have passed since *Walden* was first published and the world is now a very different place. Lakes are changing rapidly not because we are separate from nature but because we are so much a part of it. While many of our effects on the natural world today are new from climate change to nuclear fallout, our connections to it are ancient as core samples from lake beds reveal. In *Still Waters*, Curt Stager introduces us to the secret worlds hidden beneath the surfaces of our most remarkable lakes, leading us on a journey from the pristine waters of the Adirondack Mountains to the wilds of Siberia, from Thoreau's cherished pond to the Sea of Galilee. Through decades of firsthand investigations, Stager examines the significance of our impacts on some of the world's most iconic inland waters. Along the way, he discovers the stories these lakes contain about us, including our loftiest philosophical ambitions and our deepest myths. For him, lakes are not only mirrors reflecting our place in the natural world but also windows into our history, culture, and the primal connections we share with all life. Beautifully observed and eloquently written, Stager's narrative is filled with strange and enchanting details about these submerged worlds: diving insects chirping underwater like crickets, African crater lakes that explode, and the growing threats to some of our most precious bodies of water. Modern science has demonstrated that humanity is an integral part of nature on this planet, so intertwined with it that we have also become an increasingly powerful force of nature in our own right. *Still Waters* reminds us how beautiful, complex, and vulnerable our lakes are, and how more than ever it is essential to protect them.

The Animal in the Secret World of Darwin Michel Bergeron, 2011-03-03 Scientist Charles Darwin discretely opened the possibility of a purely animalistic origin for the human species. He repeatedly insisted that the differences between humans and others were a question of degree only. Sciences were however taken in the opposite direction where these differences cannot have been generated by the natural processes of biological evolution. In *The Animal in the Secret World of Darwin*, author Michel Bergeron discusses the effects on the sciences caused by the presence of questions on humanity only answerable with

religious beliefs His investigation suggests that significant elements of perceived humanity have remained sufficiently narrowly defined to continue to agree with religious beliefs over the entire period starting with the scientific revolution centuries ago and reaching the present Instead he questions could we be the simple animal who can only live on the belief not to be a simple animal To alleviate these biases on the sciences of life Bergeron advocates a different synthesis between Darwinism and Lamarckism He further asks How can sciences pretend to a cosmology neutral in term of religious influence since all of its complex mathematical developments were made under the constraint that we can link the present directly to the Big Bang
