

Level 0

No processes or tools for managing secrets — secrets sprawl in the SDLC. No detection (and remediation) in place.

Level 1

Secrets are unencrypted at rest but grouped in configuration files shared across multiple teams. Scanning for secrets is triggered manually at times, but developers are rarely involved in remediation.

Level 2

Secrets are checked encrypted into repositories with decryption keys stored in a secure vault. Secrets scanning and rotation are performed periodically.

Level 3

Secrets are scoped, stored in a vault and shared using a secrets manager. Automated detection on shared repositories and final artifacts is continuous.

Level 4

Secrets are scoped, stored in a vault and shared with a secrets manager. Detection is preventive and integrated into development workflows (local workstations, CI pipelines, etc.). Developers remediate their incidents.
