Loss Prevention in the Process Industries. Vol. 2 F. P. Lees, 1980 *Lees' Loss Prevention in the Process Industries*
Frank Lees, 2005-01-10 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport Plants have become larger and are often situated in or close to densely populated areas Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few The field of Loss Prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property This book is a detailed guidebook to defending against these and many other hazards It could without exaggeration be referred to as the bible for the process industries This is THE standard reference work for chemical and process engineering safety professionals For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed by those practicing in the field **Loss Prevention in the Process Industries** Frank P. Lees, 2001 **Dust Explosions** P. Field, 2012-12-02 Handbook of Powder Technology Volume 4 Dust Explosions presents the dust explosion problem in general terms and describes how and why dusts explode This book discusses the various approaches used to deal with the dust explosion hazards Organized into five chapters this volume begins with an overview of the methods used to assess remove or minimize the hazard of dust explosions This text then examines the factors that influence the initiation and severity of an explosion Other chapters consider the explosion prevention and explosion protection techniques This book discusses as well the characteristics of a dust explosion and the historical development of the problem The final chapter deals with the significant concept of explosion protection to reduce the worst effects of an explosion to an acceptable level This book is a valuable resource for managers engineers scientists safety personnel and others involved in the handling and processing of materials in solid particulate form What Went Wrong? Trevor Kletz, 2009-06-17 What Went Wrong has revolutionized the way industry views safety The new edition continues and extends the wisdom innovations and strategies of previous editions by introducing new material on recent incidents and adding an extensive new section that shows how many accidents occur through simple miscommunications within the organization and how straightforward changes in design can often remove or

reduce opportunities for human errors Kletz approach to learning as deeply as possible from previous experiences is made yet more valuable in this new edition which for the first time brings together the approaches and cases of What Went Wrong with the managerially focussed material previously published in Still Going Wrong Updated and supplemented with new cases and analysis this fifth edition is the ultimate resource of experienced based analysis and guidance for the safety and loss prevention professionals A million dollar bestseller this trusted book is updated with new material including the Texas City and Buncefield incidents and supplemented by material from Trevor Kletz's Still Going Wrong Now presents a complete analysis of the design operational and for the first time managerial causes of process plant accidents and disasters plus their aftermaths Case histories illustrate what went wrong why it went wrong and then guide readers in how to avoid similar tragedies learn from the mistakes of others
