Measurement In Contract Control:

Measurement in Contract Control Martin Barnes, 1977 **Managing Measurement Risk in Building and Civil Engineering** Peter Williams, 2015-12-14

Measurement in civil engineering and building is a core skill and the means by which an architectural or engineering design may be modelled financially providing the framework to control and realise designs within defined cost parameters to the satisfaction of the client. Measurement has a particular skill base but it is elevated to an art because the quantity surveyor is frequently called upon to interpret incomplete designs in order to determine the intentions of the designer so that contractors may be fully informed when compiling their tenders. Managing Measurement Risk in Building and Civil Engineering will help all those who use measurement in their work or deal with the output from the measurement process to understand not only the ins and outs of measuring construction work but also the relationship that measurement has with contracts, procurement, claims and post contract control in construction. The book is for quantity surveyors, engineers and building surveyors but also for site engineers required to record and measure events on site with a view to establishing entitlement to variations, extras and contractual claims. The book focuses on the various practical uses of measurement in a day to day construction context and provides guidance on how to apply quantity surveying conventions in the many different circumstances encountered in practice. A strong emphasis is placed on measurement in a risk management context as opposed to simply taking off quantities. It also explains how to use the various standard methods of measurement in a practical working environment and links methods of measurement with conditions of contract encompassing the contractual issues connected with a variety of procurement methodologies. At the same time the many uses and applications of measurement are recognised in both a main contractor and subcontractor context. Measurement has moved into a new and exciting era of on screen quantification and BIM models but this has changed nothing in terms of the basic principles underlying measurement: thoroughness, attention to detail, good organisation, making work auditable and above all understanding the way building and engineering projects are designed and built. This book will help to give you the confidence to both measure and understand measurement risk issues by presenting the subject of measurement in a modern context with a risk management emphasis, recognising the interrelationship of measurement with contractual issues including identification of pre and post contract measurement risk issues, emphasising the role of measurement in the entirety of the contracting process, particularly considering measurement risk implications of both formal and informal tender documentation and common methods of procurement, conveying the basic principles of measurement and putting them in an IT context, incorporating detailed coverage of NRM1 and NRM2, CESMM4, Manual of Contract Documents for Highway Works and POM I, including a comparison of NRM2 with SMM7 and a detailed analysis of changes from CESMM3 to CESMM4, discussing the measurement implications of major main and sub contract conditions, JCT NEC3 Infrastructure Conditions and FIDIC, providing detailed worked examples and explanations of computer based measurement using a variety of industry

standard software packages Contract Management Peter Sammons, 2017-07-03 Contract management is a key management skill yet it is underplayed in most organizations which usually default to project management skills as a proxy for contract management skills Whilst project management skills are equally essential they are not the same thing Contract Management looks at the wider contract management picture from an industrial commercial perspective and helps set out typical structures and processes that assist the contract management task The author uses diagrammatic representations to depict complex ideas Contract Management includes learning points in each chapter looking at handling problems procedural changes and enhancing commercial performance **Contracts, Performance Measurements, and Accountability in the Public Sector** Gavin Drewry, Carsten Greve, Thierry Tanquerel, 2005 This book addresses issues to do with public accountability audit and performance measurement that are both highly topical and of crucial importance to the theory and practice of public administration in an era of contractualized public management The literature on public sector contracting covering both hard agreements ones that are legally enforceable and soft agreements enforced by negotiation and mutual trust has been growing for some time and the present book adds a primarily European perspective on contracting performance based management and accountability One important aspect of this study is its recognition that those responsible for monitoring public services and holding them to account have had to an increasing extent to reconcile tensions between on the one hand the need for strong oversight and on the other the encouragement of innovation and risk in an increasingly competitive and entrepreneurial public service culture Following an introductory overview by the three editors the book is in three parts The first part deals with the theory and practice of performance measurement and evaluation the second part provides a series of specific case studies of audit and accountability in a variety of countries and contexts the third part offers some wider cross cutting perspectives Based on the work of the EGPA permanent study group on the history of contractualization Contracts Performance Measurement and Accountability in the Public Sector draws upon the wide expertise and research interests of academics and practitioners from the United Kingdom Denmark Switzerland Belgium Sweden and the USA **Cost & Schedule Control Systems Criteria for Contract Performance Measurement** United States. Measuring Service Contract Performance Andrew P. Hunter, Gregory Sanders, 2021-04-15 Researching and manufacturing fighters ships and tanks are only part of the picture for defense contracts Contracting for services accounts for over 41 percent of DoD contract obligations in 2018 Services include maintaining equipment moving people and things creating software providing server space and construction Service contracting is challenging as services can be difficult to define and measure But services are increasingly central to the U S economy The Department of Defense seeks to attract new firms that will increase its speed and agility many of these firms are service providers e g data analytics or cloud computing CSIS looked at a million contracts to evaluate how three factors influence performance 1 service complexity 2 contract management capacity 3 vendor s history working with a DoD contracting office The existing data fails to explain large differences in contract office performance More DoD transparency about contracting office capacity could help make a case for further investments The report also found that when vendors and contracting offices have a longer history they tend to have better results That means DoD needs to think not only about recruiting new partners but also about helping them succeed
