Mechanics of Turbulence of Multicomponent Gases Mikhail Ya. Marov,Aleksander V. Kolesnichenko,2006-04-18 Space exploration and advanced astronomy have dramatically expanded our knowledge of outer space and made it possible to study the indepth mechanisms underlying various natural phenomena caused by complex interaction of physical chemical and dynamical processes in the universe Huge breakthroughs in astrophysics and the planetary sciences have led to increasingly complicated models of such media as giant molecular clouds giving birth to stars protoplanetary accretion disks associated with the solar system s formation planetary atmospheres and circumplanetary space The creation of these models was promoted by the development of basic approaches in modern mechanics and physics paralleled by the great advancement in the computer sciences As a result numerous multidimensional non stationary problems involving the analysis of evolutionary processes can be investigated using wide range numerical experiments Turbulence belongs to the most widespread and at the same time the most complicated natural phenomena related to the origin and development of organized structures dies of different scale at a definite flow regime of fluids in essentially non linear hydrodynamic systems This is also one of the most complex and intriguing sections of the mechanics of fluids The direct numerical modeling of turbulent flows encounters large mathematical difficulties while the development of a general turbulence theory is hardly possible because of the complexity of interacting coherent structures Three dimensional non steady motions arise in such a system under loss of laminar flow stability defined by the critical value of the Reynolds number Mechanics of Turbulence of Multicomponent Gases ,2001

Astrophysical Disks Aleksey M. Fridman,Mikhail Ya. Marov,Ilya G. Kovalenko,2006-07-25 This book deals with collective and stochastic processes in astrophysical disks involving theory observations and the results of modelling It examines the spiral vortex structure in galactic and accretion disks and stochastic and ordered structures in developed turbulence The book advances the study in this important branch of astrophysics and will benefit professional researchers lecturers and graduate students **Light Pollution Handbook** Kohei Narisada,Duco Schreuder,2004-11-30 Constituting the first holistic overview including practical remedies this handbook provides the background needed by anyone grappling with the complex issue of outdoor lighting and its effects It describes not only the problems that astronomers and other night sky observers face in reducing the problems of information loss due to light pollution as well as the problems lighting technologists face in optimising outdoor lighting installations that cause little or no light pollution The first part is directed to decision makers and managers of outdoor space and covers the areas of general interest culminating in recommendations to reduce the impact of light pollution The second part is directed primarily to scientists and engineers as a support to the design and maintenance of outdoor lighting installations with special reference to astronomical observations Elaborating issues from the first part these contributions include examples that refer to specific outdoor lighting projects and to more general policy and educational measures Written for designers of lighting equipment and managers of astronomical observatories but also aimed at the

authorities and decision makers responsible for the organization and maintenance of the public space it will serve a good purpose in graduate or postgraduate curricula for scientists engineers economists and law students This handbook fills the gap that exists between astronomical textbooks engineering texts and popular brochures about light pollution **Stellar Astrophysics** Ka Lok Cheng, Kam Ching Leung, T.P. Li, 2003-11-30 The Pacific Rim Conferences for the first decade from the mid 1980 s to the mid 1990 s were primarily concerned with binary stars research The Conference expanded to all areas of Stellar Astrophysics for the last two meetings in Hong Kong at Hong Kong University of Science and Technology in 1997 and at the Hong Kong University in 1999 At the conclusion of the very successful Pacific Rim Conference on Stellar Astrophysics held in Hong Kong University members of the Scientific Organizing Committee began planning for the next conference We approached Professor Tan Lu of Nanjing University and Professor Tipei Li of the Institute of High Energy Physics about hosting a conference in China The city of Xi an in Shaanxi province and a city in Yunnan province were considered to be the most likely locations It became crucial to find the right person to serve as Chair or Co chairs for the Local Organizing Committee Initially Professor Lu was the logical choice but he declined for personal reasons Professor Li was invited to lead a new department of Astrophysics at Tsinghua University so he could not take on the additional load of chairing the LOC Professor Gang Zhao of Beijing Astronomical Observatory was approached to take on the task but he also declined This has been a busy time for Chinese astronomers The SOC decided to have the conference dedicated to honor Dr Helmut A
