Origins Reconsidered In Search Of What Makes Us Human:

Origins Reconsidered Richard E. Leakey, Richard Leakey, Roger Lewin, 1992 An account of Richard Leakey's search for not only human origins but also the origin of humanity Since writing *Origins* in 1978 he has shifted his studies from the eastern to the western shore of Lake Turkana in Kenya Richard Leakey also wrote *People of the Lake* and *The Making of Mankind*

Origins Reconsidered Richard Leakey, Roger Lewin, 2008-06-26 Reassesses human prehistory incorporating ideas from philosophy anthropology molecular biology and linguistics to explore how humans acquired the qualities of consciousness and humanity

On Animals David L. Clough, 2012-02-02 This volume is a project in systematic theology a rigorous engagement with the Christian tradition in relation to animals under the doctrinal headings of creation reconciliation and redemption and in dialogue with the Bible and theological voices central to the tradition The book shows that such engagement with the tradition with the question of the animal in mind produces surprising answers that challenge modern anthropocentric assumptions For the most part therefore the novelty of the project lies in the questions raised rather than the proposal of innovative answers to it The transformation in our thinking about animals for which the book argues results in the main from looking squarely for the first time at the sum of what we are already committed to believing about other animals and their place in God's creation

About Life Paul S. Agutter, Denys N. Wheatley, 2007-03-06 Thanks to the popular media and to books by Dawkins Fortey Gould Margulis and other writers people are informed about many aspects of biology Everyone seems to know a little about evolution for example and about DNA and the possibilities good and bad afforded by research in molecular genetics Most people know some of the arguments for and against the likelihood of life on other planets And so on We are glad that these pieces of information have become so widely available However we do not assume any particular knowledge other than the most basic in this book Our aim is to address general questions rather than specific issues We want to enable our readers to join their disparate pieces of knowledge about biology together The most basic of these general questions and perhaps the most difficult can be expressed in beguilingly simple words What is life What does modern biology tell us about the essential differences between living organisms and the inanimate world An attempt to answer this question takes us on a journey through almost the whole of contemporary cell and molecular biology which occupies the first half of the book The journey is worth the effort The provisional answer we attain provides a coherent unifying context in which we can discuss evolution the origin of life extraterrestrial life the meaning of intelligence the evolution of the human brain and the nature of mind

Perspectives William F Brown, 2016-03-06 From the first seconds Following the Big Bang to our best guesses for the fate of the universe and humanity science provides stunning new perspectives about the place of humanity in the cosmos Humans may live on one planet in one small corner of the Milky Way itself one of billions of other galaxies but Earth may be unique in one respect Earth is teeming with life one species of which through chance and natural selection developed an extraordinary brain gifted with imagination curiosity and a compulsion to

understand ourselves and the universe Perspectives is a journey through deep time from the creation of the universe to the beginnings of life our human origins and later the rise of culture and religion It explores what it means to be human and where our technology could take us in the years and centuries to come www.williamfbrown.com *A Brain for All Seasons* William H. Calvin, 2010-08-02 **Debating Humankind's Place in Nature, 1860-2000** Richard G. Delisle, 2015-07-14 This text the only one of its kind on the market surveys the development of the field of human evolution from its inception through today It provides students with a broad contrast enabling them to fully understand the value and role of current paleoanthropological research Features An historical approach Establishes for students the nature of paleoanthropology through the historical development of the field from 1860 through 2000 and shows students that paleoanthropology is a remarkably progressive field A focus on the debates in the field of human evolution especially the phylogenetic or genealogical debates Analyzes four distinct debates presented separately from their inception to the present 1 Humankind's place among the primates 2 The place of the australopithecines relative to the human line 3 Debates on human phylogeny proper 4 Proposed scenarios of hominization Presentation and analysis of the viewpoints of over 150 scholars Gives students a valuable reference work for the future includes over 1200 references in the bibliography as well as a comprehensive text for today For junior senior courses in Human Evolution and Paleoanthropology in Anthropology departments

Deconstructing Prehumanity Jorge Serrano, 2015-12-01 Deconstructing Prehumanity is an investigation into the role of archaeological perception in the construction of race It explores how social knowledge and disciplinary subjectivity have shaped our organization of the human past and how this organization and its lexicon have fueled racialism The idea of an African prehuman hierarchy powers American race relations in a damaging way Scientific physical distinctions used in ethnological studies quantified and qualified physical and racial differences among so called African prehumans all of which plague human social relations as they extend harmful ideas about peoples of African descent This book delves into the evolution of terms and utilizes Africana studies to present the systematic reconstruction of a black past By reviewing ethnological studies nomenclature and how such processes play a role in conceiving African origins the multidisciplinary work supplies explanations about notions of African nature culture and race as prehuman It explicates paleoanthropological categories and connects them to racialized inferences Deconstructing Prehumanity is intended for readers looking to understand how perceptions about human origins add to racialization as it proffered a utilitarian past **Encyclopedia of Evolution** Stanley A. Rice, 2009 Evolutionary science is not only one of the greatest breakthroughs of modern science but also one of the most controversial Perhaps more than any other scientific area evolutionary science has caused us all to question what we are where we came from and how we relate to the rest of the universe Encyclopedia of Evolution contains more than 200 entries that span modern evolutionary science and the history of its development This comprehensive volume clarifies many common misconceptions about evolution For example many people have grown up being told that the fossil

record does not demonstrate an evolutionary pattern and that there are many missing links In fact most of these missing links have been found and their modern representatives are often still alive today The biographical entries represent evolutionary scientists within the United States who have had and continue to have a major impact on the broad outline of evolutionary science The biographies chosen reflect the viewpoints of scientists working within the United States Five essays that explore interesting questions resulting from studies in evolutionary science are included as well The appendix consists of a summary of Charles Darwin s *Origin of Species* which is widely considered to be the foundational work of evolutionary science and one of the most important books in human history The five essays include How much do genes control human behavior What are the ghosts of evolution Can an evolutionary scientist be religious Why do humans die Are humans alone in the universe

Evolutionary Epistemology, Language and Culture Nathalie Gontier, Jean Paul van Bendegem, Diederik Aerts, 2006-07-25 For the first time in history scholars working on language and culture from within an evolutionary epistemological framework and thereby emphasizing complementary or deviating theories of the Modern Synthesis were brought together Of course there have been excellent conferences on Evolutionary Epistemology in the past as well as numerous conferences on the topics of Language and Culture However until now these disciplines had not been brought together into one all encompassing conference Moreover previously there never had been such stress on alternative and complementary theories of the Modern Synthesis Today we know that natural selection and evolution are far from synonymous and that they do not explain isomorphic phenomena in the world Taking Darwin seriously is the way to go but today the time has come to take alternative and complementary theories that developed after the Modern Synthesis equally seriously and furthermore to examine how language and culture can merit from these diverse disciplines As this volume will make clear a specific inter and transdisciplinary approach is one of the next crucial steps that needs to be taken if we ever want to unravel the secrets of phenomena such as language and culture
