## **Pollution Prevention Opportunities Assessments:**

**Pollution Prevention Opportunity Assessments** Marcus J. Healey, Daniel Watts, 1998-05-15 Pollution prevention technologies are experiencing great growth as organizations seek the economies and benefits of their implementation Environmental audits anticipation of International Standards Organization ISO 9000 the desire to avoid future liabilities costs and accidental chemical releases as well as to promote worker safety and a green image in the United States and internationally combine to encourage businesses to adopt pollution prevention programs The implementation of pollution prevention requires diverse engineering and management practices that reduce or preclude the pollution that reaches the air water or soil Pollution Prevention Opportunity Assessments along with its accompanying software provides business and technical managers with straightforward guidance on how to perform pollution prevention The compiled software HOW2DOP2 is industry and process tailored and will run on virtually any machine equipped with a Web browser Pollution Prevention Opportunity Assessments is geared for small businesses that do not have large environmental staffs trained in pollution prevention principles or the time to learn thoroughly all of the background information necessary to develop a specific pollution prevention plan Concentrating on the technical and practical subjects associated with performing pollution prevention this book with the accompanying software provides practitioners with the tools to develop pollution prevention plans and to enable their businesses to benefit from their implementation *Pollution Prevention Opportunity Assessments at Hanford*, 1996 The Pollution Prevention Opportunity Assessment PPOA is a pro active way to look at a waste generating activity and identify opportunities to minimize wastes through a cost benefit analysis Hanford's PPOA process is based upon the graded approach developed by the Kansas City Plant Hanford further streamlined the process while building in more flexibility for the individual users One of the most challenging aspects for implementing the PPOA process at Hanford is one overall mission which is environmental restoration Now that the facilities are no longer in production each has a different non routine activity making it difficult to quantify the inputs and outputs of the activity under consideration **Pollution Prevention Assessment for a Manufacturer of Combustion Engine Piston Rings** Richard J. Jendrucko, 1995

*Pollution Prevention Opportunity Assessment Benchmarking*, 1994 Pollution Prevention Opportunity Assessments P2OAs are an important first step in any pollution prevention program While P2OAs have been and are being conducted at Hanford there exists no standard guidance training tracking or systematic approach to identifying and addressing the most important waste streams The purpose of this paper then is to serve as a guide to the Pollution Prevention group at Westinghouse Hanford in developing and implementing P2OAs at Hanford By searching the literature and benchmarks other sites and agencies the best elements from those programs can be incorporated and pitfalls more easily avoided This search began with the 1988 document that introduces P2OAs then called Process Waste Assessments PWAS by the Environmental Protection Agency This important document presented the basic framework of P2OA features which appeared in almost all later

programs Major Department of Energy programs were also examined with particular attention to the Defense Programs P20A method of a graded approach as presented at the Kansas City Plant The graded approach is a system of conducting P2OAs of varying levels of detail depending on the size and importance of the waste stream Finally private industry programs were examined briefly While all the benchmarked programs had excellent features it was determined that the size and mission of Hanford precluded lifting any one program for use Thus a series of recommendations were made based on the literature review in order to begin an extensive program of P2OAs at Hanford These recommendations are in the areas of facility Pollution Prevention teams P20A scope and methodology guidance documents training for facilities and management technical and informational support tracking and measuring success and incentives

**Industrial Processes and Waste Stream Management** Howard H. Guyer, 1998-11-13 INDUSTRIAL PROCESSES and WASTE STREAM MANAGEMENT This book provides environmental technology students with a quick enjoyable way to master the knowledge and skills needed to develop and implement successful cost effective industrial pollution control programs especially when used in coordination with the Industrial Processes and Waste Stream Management video series produced by INTELECOM Intelligent Telecommunications The first section of the book lays the conceptual foundations with a detailed overview of waste stream management tools and regulations and the four EPA approved treatment methods physical chemical thermal and biological The following 20 chapters are organized by industry and provide a fascinating case by case exploration of industrial processes and how the waste streams they generate are managed in all major industries including petroleum chemicals mining metals paint textiles agriculture paper printing nuclear medical and more Features that make Industrial Processes and Waste Stream Management an ideal introduction to the subject for environmental technology students include Acclaimed user friendly modular format found in all the books in the Preserving the Legacy series Basic anatomy physiology and chemistry concepts that help clarify how toxins interact with living tissue Proven rapid learning modular format each chapter features learning objectives topic summaries chapter end reviews and practice questions Helpful sidebars that highlight critical concepts More than 175 high quality line drawings photographs diagrams charts and tables Numerous easy to perform skill building classroom activities A glossary of more than 1 000 essential terms Extensive bibliography of recommended readings in all key subject areas Industrial Processes and Waste Stream Management is also an excellent refresher quick reference guide for practicing environmental technicians

Pollution Prevention Opportunity Assessment Benchmarking , 1994 Most people agree that Pollution Prevention Opportunity Assessments P2OAs are a critical first step in any pollution prevention activity P2OAs are used to identify waste streams examine the processes which generate waste and discover ways to reduce this waste Formerly called Process Waste Assessments PWAs P2OAs were originally developed by the Environmental Protection Agency for use by companies to examine their individual manufacturing processes seeking process improvements which would reduce hazardous and material waste while saving money The current status of the

Hanford site makes traditional P2OAs PWAs difficult Hanford covers 1 450 square kilometers 560 square miles of land with almost 200 hundred on and off site waste generators and thousands of waste streams Additionally Hanford s current mission of environmental restoration ER causes operations to be discontinuous and project oriented unlike a production facility Clearly Hanford s P2OA process must be able to handle and prioritize the number and uniqueness of D D ER waste streams in a manageable fashion In order to determine an appropriate P2OA process the Pollution Prevention group at Westinghouse Hanford Company benchmarked P2OA programs at other Department of Energy sites reviewed guidelines from the Environmental Protection Agency as well as examined a few facilities at Hanford already performing P2OAs This process revealed that although there has been significant discussion of the problem very few organizations are actually conducting P2OAs on D D ER work This paper presents the comparisons of the different programs that were found details on the situation at Hanford and makes recommendations for an efficient P2OA process for Hanford s ER mission These recommendations include complete a P2OA process on the planned activity itself keep the assessments simple seek to overcome recycling barriers and find a consistent way to show progress

**The Greening of Industrial Ecosystems** National Academy of Engineering, Advisory Committee on Industrial Ecology and Environmentally Preferable Technology, 1994-01-01 In the 1970s the first wave of environmental regulation targeted specific sources of pollutants In the 1990s concern is focused not on the ends of pipes or the tops of smokestacks but on sweeping regional and global issues This landmark volume explores the new industrial ecology an emerging framework for making environmental factors an integral part of economic and business decision making Experts on this new frontier explore concepts and applications including Bringing international law up to par with many national laws to encourage industrial ecology principles Integrating environmental costs into accounting systems Understanding design for environment industrial

metabolism and sustainable development and how these concepts will affect the behavior of industrial and service firms The volume looks at negative and positive aspects of technology and addresses treatment of waste as a raw material This volume will be important to domestic and international policymakers leaders in business and industry environmental specialists and engineers and designers *Pollution Prevention Opportunity Assessment for Landscape Waste* ,1996 DOE orders mandate the development of a waste minimization program The program s goals are to reduce volumes of wastes and toxicity implement a system of tracking and reporting improvements and devise a method for performing tasks To satisfy the requirements of this program Sandia conducts pollution prevention opportunity assessments PPOAs to identify waste generating processes The information collected from a PPOA then is used to identify waste minimization opportunities This pollution prevention opportunity assessment was conducted using Sandia s new methodology for prioritizing evaluating and managing site wide waste streams This new methodology and the list of priority waste streams are described in the wastes revision of the Pollution Prevention Opportunity Assessment Plant This PPOA addresses landscape waste minimization partially in response to recent legislation and regulations *Pollution Prevention Opportunity Assessments, a Training and Resource Guide* ,1998 The intention of the Pollution Prevention Opportunity Assessment Training and Resource Guide is to help Hanford waste generators identify ways to reduce waste through the Pollution Prevention Opportunity Assessment P20A process This document presents pollution prevention tools and provides a step by step approach for conducting assessments
