A. Ravve,2012-12-06 Principles of Polymer Chemistry Second Edition was written for advanced undergraduate and graduate students in polymer chemistry along with practicing chemists who need a reference guide Many important events have taken place since the First Edition was published in 1995 and they are updated here For example sections have been included on controlled living free radical polymerization and sections on metathesis type polymerization and metallocene catalysts were expanded The book was also expanded to include discussions of thermodynamics of elasticity thermodynamics of polymeric solutions and rheology and viscoelasticity A chapter on degradation of polymers was also added *Biocatalysis*

D.A. Abramowicz,2013-03-09 The action of enzymes fascinated mankind long before they were recognized for the complex chemicals that they are The first application of these remarkable compounds to produce ethanol by fermentation is lost to antiquity Payer and Persoz Ann Chim Phys 53 73 1833ii appear to have provided the first step toward understanding this complex area when they reported the isolation of diastase in 1833 These workers showed that diastase could catalyze the hydrolysis of starches to sugars Somewhat earlier Kirchhoff Schwigger s Journal 4 108 1812 had shown that a small amount of dilute acid could hydrolyze a seemingly endless amount of starch to sugars The genius of Berzelius recognized the commonality of these two observations in connection with a few other isolated observations and in 1834 coined the term catalysis to describe such actions Professor Liebig was one of the giants of the chemical world in 1840 In addition to his own work Liebig was training the world s next generation of chemists in his laboratory in Giessen This cadre of chemists were very impressed by the master teacher so that

is it only natural that Liebig's views should dominate with this next generation of chemists Liebig was in the 1830s and 1840s developing his mastery of agricultural chemistry The mechanism of putrefication was of great concern to Liebig and he turned to the newly defined area of catalysis for an explanation
