**Modification of Polymers** Charles E. Carraher, James A. Moore, 2012-12-06 The sheer volume of topics which could have been included under our general title prompted us to make some rather arbitrary decisions about content Modification by irradiation is not included because the activity in this area is being treated elsewhere We have chosen to emphasize chemical routes to modification and have striven to present as balanced a representation of current activity as time and page count permit Industrial applications both real and potential are included Where appropriate we have encouraged the contributors to include review material to help provide the reader with adequate context The initial chapter is a review from a historical perspective of polymer modification and contains an extensive bibliography The remainder of the book is divided into four general areas Reactions and Preparation of Copolymers

Reactions and Preparation of Block and Graft Copolymers Modification Through Condensation Reactions Applications The chemical modification of homopolymers such as polyvinylchloride polyethylene poly chloroalkylene sulfides polysulfones poly chloromethylstyrene polyisobutylene polysodium acrylate polyvinyl alcohol polyvinyl chloroformate sulfonated polystyrene block and graft copolymers such as poly styrene block ethylene co butylene block styrene poly I 4 polybutadiene block ethylene oxide star chlorine telechelic polyisobutylene poly isobutylene co 2 3 dimethyl 1 3 butadiene poly styrene co N butylmethacrylate cellulose dex tran and inulin is described
