Polyneuropathies Associated With Plasma Cell Dyscrasias:

Polyneuropathies Associated with Plasma Cell Dyscrasias John J. Kelly, Robert A. Kyle, Norman Latov, 2012-12-06

Plasma cell dyscrasias are common causes of peripheral neuropathy. Peripheral neuropathy may be the first manifestation of multiple myeloma, amyloidosis, or monoclonal gammopathy of undetermined significance (MGUS). Peripheral neuropathy occurs in more than one half of patients with osteosclerotic myeloma. The hematologic disorders are such an important association with peripheral polyneuropathy that for the last decade we have obtained a metastatic bone survey and

immunoelectrophoresis of serum and a 24-hour urine specimen on all patients older than 40 years with undiagnosed peripheral neuropathy. This textbook on polyneuropathies and plasma cell dyscrasia is welcome because the subject is of considerable medical importance and because the authors are expert in these disorders. Kelly's studies have shown that a systematic search for monoclonal proteins in plasma and urine among patients with neuropathy of unknown cause increases diagnostic yield. Latov's studies have focused on the role of myelin-associated glycoproteins (MAG) in the induction of neuropathy. Kyle, director of the Special Protein Laboratory at Mayo Clinic, brings a broad clinical and laboratory perspective and experience. The timing of the textbook is just right because there is much new information which needs to be summarized.

Immunological and Infectious Diseases of the Peripheral Nerves N. Latov, John H. J. Wokke, John J. Kelly, 1998-05-07. This 1998 book was the first to be dedicated to peripheral neuropathies of immune or infectious origin, covering pathogenesis, diagnosis, and treatment.

Neuromuscular Disorders in Clinical Practice Bashar Katirji, Henry J. Kaminski, Robert L. Ruff, 2013-10-11. Comprehensive, thoroughly updated and expanded. *Neuromuscular Disorders in Clinical Practice*, Second Edition, encompasses all disorders of the peripheral nervous system, covering all aspects of neuromuscular diseases from diagnosis to treatment. Mirroring the first book, this two-volume edition is divided into two parts. Part one discusses the approach to neuromuscular disorders, covering principles and basics, neuromuscular investigations, and assessment and treatment of neurological disorders. Part two then addresses the complete range of specific neuromuscular diseases: neuronopathies, peripheral neuropathies, neuromuscular junction disorders, muscle ion channel disorders, myopathies, and miscellaneous neuromuscular disorders and syndromes. *Neuromuscular Disorders in Clinical Practice*, Second Edition, is intended to serve as a comprehensive text for both novice and experienced practitioners. General neurologists as well as specialists in neuromuscular medicine and trainees in neuromuscular medicine, clinical neurophysiology, and electromyography should find this book inclusive, comprehensive, practical, and highly clinically focused. Additionally, specialists in physical medicine and rehabilitation, rheumatology, neurosurgery, and orthopedics will find the book of great value in their practice.

Eduardo Nobile-Orazio, 2013-08-17 The association of neuropathy with monoclonal gammopathy has been known for several years even if the clinical and pathogenetic relevance of this association is not completely defined This is not a marginal problem since monoclonal gammopathy is present in 1-3% of the population above 50 years in whom it is often asymptomatic and in at least 8% of patients is associated with a symptomatic neuropathy representing one of the leading causes of neuropathy in aged people Monoclonal gammopathy may result from malignant lymphoproliferative diseases including multiple myeloma or solitary plasmacytoma Waldenström's macroglobulinemia WM other IgM secreting lymphoma or chronic lymphocytic leukemia and primary systemic amyloidosis AL In most instances it is not associated with any of these disorders and is defined monoclonal gammopathy of undetermined significance MGUS for its possible though infrequent evolution into malignant forms Several data support the pathogenetic role of the monoclonal gammopathy in the neuropathy particularly when of IgM isotype where IgM reactivity to several neural antigens has been reported Increased levels of VEGF have been implicated in POEMS syndrome However there are as yet no defined therapies for these neuropathies as their efficacy has not been confirmed in randomized trials **Neurology**
