Ponds - Planning, Design, Construction (Agriculture Handbook 590) United States Department of Agriculture, 2016-05  
For many years farmers and ranchers have been building ponds for livestock water and for irrigation. By 1980 more than 21 million ponds had been built in the United States by land users on privately owned land. More will be needed in the future. The demand for water has increased tremendously in recent years and ponds are one of the most reliable and economical sources of water. Ponds are now serving a variety of purposes including water for livestock and for irrigation, fish production, field and orchard spraying, fire protection, energy conservation, wildlife habitat, recreation, erosion control, and landscape improvement. This handbook describes embankment and excavated ponds and outlines the requirements for building each. The information comes from the field experience and observation of land users, engineers, conservationists, and other specialists. Ponds--planning, Design, Construction, 1997. The handbook describes the requirements for building a pond. It is useful to the landowner for general information and serves as a reference for the engineer, technician, and contractor.

This book explores the many ways in which process facilities, equipment, and infrastructure might deteriorate upon continuous exposure to operating and climatic conditions. It covers the functional and physical failure modes for various categories of equipment and discusses the many warning signs of deterioration. Dealing with Aging Process Facilities and Infrastructure also explains how to deal with equipment that may not be safe to operate. The book describes a risk based strategy in which plant leaders and supervisors can make more informed decisions on aging situations and then communicate them to upper management effectively. Additionally, it discusses the dismantling and safe removal of facilities that are approaching their intended lifecycle or have passed it altogether. Filled with numerous case studies featuring photographs to illustrate the positive and negative experiences of others who have dealt with aging facilities. Dealing with Aging Process Facilities and Infrastructure covers the causes of equipment failures due to aging and their consequences plant management

commitment and responsibility inspection and maintenance practices for managing life cycle specific aging asset integrity management practices and more Describes symptoms and causal mechanisms of aging in various categories of process equipment Presents key considerations for making informed risk based decisions regarding the repair or replacement of aging process facilities and infrastructure Discusses practices for managing process facility and infrastructure life cycle Includes examples and case histories of failures related to aging Dealing with Aging Process Facilities and Infrastructure is an important book for industrial practitioners who are often faced with the challenge of managing process facilities and infrastructure as they approach the end of their useful lifecycle    National Engineering Handbook United States. **The Planner's Guide to Natural Resource Conservation:** Adrian X. Esparza,Guy McPherson,2009-06-12 Much of the country s recent population growth is situated in exurban areas By many accounts exurbanization has become the dominant pattern of land development in the country and there is no indication it will slow in the foreseeable future Theobald 2005 Brown et al 2005 Glennon and Kretser 2005 By definition exurban development takes place beyond the metropolitan fringe often in rural and remote areas The development of new exurban communities is a growing trend especially in the West In this case developers and homebuilders seek large tracts of land up to thousands of acres in rural areas typically within 50 miles of a large city where they plan entire communities consisting of commercial retail and residential land uses Recreational amenities such as golf courses and hiking biking trails are often included in these master planned developments Our philosophy is reflected in the book s two objectives First we seek to document the extent and impacts of exurban development across the country At issue is demonstrating why planners and the public at large should be concerned about exurbanization We will demonstrate that even though exurbanization favors amenity rich regions it affects all areas of the country through the loss of agricultural and grazing lands impacts to watersheds and land modification A summary of environmental impacts is presented including the loss of wildlands and agricultural productivity land modification soil erosion impacts to terrestrial hydrologic systems the loss of biodiversity nonnative and endangered species and other topics Our second aim is to provide readers from diverse nonscientific backgrounds with a working knowledge of how and why exurbanization impacts environmental systems This is accomplished by working closely to ensure contributors follow a specific outline for each chapter First contributors will spell out fundamental concepts principles and processes that applyto their area of expertise e g riparian areas Contributors will move beyond a cursory understanding of ecological processes without overwhelming readers with the dense material found typically in specialized texts For this reason visuals and other support materials will be integral to each chapter We have chosen contributors carefully based on their record as research scientists and acumen as educators Second once the mechanics have been laid out authors will explain how and why land development in nearby areas influences ecosystems Issues of interdependency modification and adaptation spatial scale and varying time horizons will be featured Third contributors will weigh in on the pros and cons of

various land development schemes Fourth authors will share their thinking on the merits of conservation devices such as wildlife corridors open space requirements and watershed management districts Finally each chapter will conclude by identifying pitfalls to avoid and highlighting best practices that will mitigate environmental problems or avoid them altogether In sum after completing each chapter readers should have a firm grasp of relevant concepts and processes an understanding of current research and know how to apply science to land use decisions
