Introduction aux règles de construction parasismique Claude SaintJean, 2014-10-03 Les préoccupations de notre milieu professionnel concernant les effets des séismes sur les constructions ont accéléré la mise au point des techniques de calcul Maîtrisant ces techniques depuis leur apparition Claude SaintJean en a suivi le développement tout au long de leur évolution C'est assurément le seul qui en France a pratiqué tous les logiciels dédiés au calcul dynamique des structures Il est capable de comprendre leur architecture et leurs limites d'application d'apprécier la facilité et la pertinence de la modélisation proposée et bien sûr d'examiner la validité et la fiabilité des résultats Cette démarche est d'autant plus méritoire que l'action sismique entièrement aléatoire nous contraint de connaître les limites des procédures de calcul dont nous pouvons disposer Claude SaintJean est capable d'étudier tous les aspects du calcul dynamique tant sous l'angle théorique que pratique les conseils dont il accompagne les projets sont toujours très bien accueillis par les bureaux d'études les méthodes de calcul qu'il mentionne sont d'ailleurs celles qu'on y utilise généralement Il y ajoute toutefois des remarques personnelles très pertinentes qu'il illustre ici de deux exemples de bâtiments l'un contreventé par portiques l'autre par voiles Capable d'aborder les problèmes théoriques les plus pointus Claude SaintJean entend néanmoins que ce soient le bon sens et les ordres de grandeur qui gouvernent la démarche calculatoire Les nombreux exemples de calcul illustrent parfaitement bien l'impérieuse nécessité de vérifier les conditions d'équilibre tant statique que sismique tandis que la toute nouvelle approche de calcul en poussée progressive fait l'objet d'un chapitre distinct et comporte un exemple simple d'application qui en facilite la compréhension Victor Davidovici Président d'honneur de l'Association française de génie parasismique
