*Thermal Processing of Foods* K. P. Sandeep, 2011-05-12 The food industry has utilized automated control systems for over a quarter of a century However the past decade has seen an increase in the use of more sophisticated software driven on line control systems especially in thermal processing unit operations As these software driven control systems have become more complex the need to validate their operation has become more important In addition to validating new control systems some food companies have

undertaken the more difficult task of validating legacy control systems that have been operating for a number of years on retorts or aseptic systems Thermal Processing Control and Automation presents an overview of various facets of thermal processing and packaging from industry academic and government representatives The book contains information that will be valuable not only to a person interested in understanding the fundamental aspects of thermal processing eg graduate students but also to those involved in designing the processes eg process specialists based in food manufacturing and those who are involved in process filing with USDA or FDA The book focuses on technical aspects both from a thermal processing standpoint and from an automation and process control standpoint Coverage includes established technologies such as retorting as well as emerging technologies such as continuous flow microwave processing The book addresses both the theoretical and applied aspects of thermal processing concluding with speculations on future trends and directions
